Revision A

May 2020

No part of this publication may be reproduced or used in any form, or by any electrical or mechanical means, without permission in writing from Zebra. This includes electronic or mechanical means, such as photocopying, recording, or information storage and retrieval systems. The material in this manual is subject to change without notice.

The software is provided strictly on an "as is" basis. All software, including firmware, furnished to the user is on a licensed basis. Zebra grants to the user a non-transferable and non-exclusive license to use each software or firmware program delivered hereunder (licensed program). Except as noted below, such license may not be assigned, sublicensed, or otherwise transferred by the user without prior written consent of Zebra. No right to copy a licensed program in whole or in part is granted, except as permitted under copyright law. The user shall not modify, merge, or incorporate any form or portion of a licensed program with other program material, create a derivative work from a licensed program, or use a licensed program in a network without written permission from Zebra. The user agrees to maintain Zebra's copyright notice on the licensed programs delivered hereunder, and to include the same on any authorized copies it makes, in whole or in part. The user agrees not to decompile, disassemble, decode, or reverse engineer any licensed program delivered to the user or any portion thereof.

Zebra reserves the right to make changes to any product to improve reliability, function, or design.

Zebra does not assume any product liability arising out of, or in connection with, the application or use of any product, circuit, or application described herein. No license is granted, either expressly or by implication, estoppel, or otherwise under any patent right or patent, covering or relating to any combination, system, apparatus, machine, material, method, or process in which Zebra products might be used. An implied license exists only for equipment, circuits, and subsystems contained in Zebra products.

Warranty

For the complete hardware product warranty statement, go to: www.zebra.com/warranty.

Revision History

Changes to the original guide are listed below:

Change	Date	Description
-01 Rev. A	12/2016	Initial Release.
-02 Rev. A	1/2017	Initial Release with update to cleaning instructions.
-03 Rev. A	2/2017	Added Signature Capture Preferences chapter. Updated sample bar codes.
-04 Rev. A	4/2017	Added: - USB certification logo. Updated: - Maintenance section - GS1 DataBar-14 to GS1 DataBar Omnidirectional - Zebra copyright statement.
-05 Rev. A	6/2018	Rev. B Software Updates Added: - New Feedback email address. - Grid Matrix parameters - Febraban parameter - USB HID POS (formerly known as Microsoft UWP USB) - Product ID (PID) Type - Product ID (PID) Value - ECLevel - Note to MSI Reduced Quiet Zone (Level 3 not supported by MSI). Updates: - SSI baud rate hex values for baud rates 230,400, 460,800, and 921,600. - ISBT Concatenation default to Disable (0). - Bar code values for enabling (2) and disabling (0) LED on Good Decode. - Max time value in Hands-Free Decode Session Timeout. - Picklist Mode description. - Trigger Mode, Presentation (Blink) description. - Parameter #744 bar codes.
-06 Rev. A	10/2018	- Added Grid Matrix sample bar code. - Moved 123Scan chapter.
-07 Rev. A	11/2019	Added: - SITA and ARINC parameters. - IBM-485 Specification Version. Updated: - All URLs (removed 'http'). - Zebra copyright statement.
-08EN Rev. A	05/2020	- Split 123Scan chapter to Chapter 2 123Scan and Software Tools and Chapter 13 Data Formatting: ADF. - Updated 123Scan Requirements section. - Updated Advanced Data Formatting (ADF) section. - Updated Environmental Sealing in Table 4-2. - Added the USB Cert information in Table 4-2.

TABLE OF CONTENTS

Chapter 13: Data Formatting: ADF

Appendix A: Standard Default Parameters

Appendix B: Country Codes

Appendix C: Country Code Pages

Appendix D: CKJ Decode Control

Appendix E: Programming Reference

ABOUT THIS GUIDE

Introduction

The *DS2208 Product Reference Guide* provides general instructions for setting up, operating, maintaining, and troubleshooting the DS2208 series digital scanner.

Configurations

This guide includes the DS2208 series digital scanner configurations listed in *Table A*.

Table A: *Digital Scanner Configurations*

Model Configuration	Description
DS2208-SR00006ZZWW	DS2208: Area Imager, Standard Range, Corded, Nova White
DS2208-SR00007ZZWW	DS2208: Area Imager, Standard Range, Corded, Twilight Black
DS2208-TT00007ZZJP	DS2208: Area Imager, Toshiba Tec, Corded, Twilight Black - Japan Only
DS2208-SR00007ZZK	DS2208: Area Imager, Standard Range, Corded, Twilight Black - India and S. Korea Only

Related Product Line Configurations

The product configurations related to the DS2208 digital scanner are as follows.

✓ *NOTES* Check Solution Builder for additional information regarding all available accessories, and the latest available configurations.

Table B: *Accessories for the Digital Scanner*

Product ID	Description
20-71043-04R	Gooseneck Intellistand - Black
STND-GS00UNC-04	Universal Gooseneck Intellistand – Black
21-71043-04R	Cup (Black)
20-67176-01R	Desktop Holder
11-66553-06R	Wall Mount Holder

Cables

The full list of supported cables can be found at:

partnerportal.zebra.com/PartnerPortal/product_services/downloads_z/barcode_scanners/Universal-Cable-Guide-Bar-Code-Scanners.xlsx.

Chapter Descriptions

Topics covered in this guide are as follows:

- *Chapter 1, Getting Started* provides a product overview, unpacking instructions, and cable connection information.

- *Chapter 2, 123Scan and Software Tools* provides a brief description of the Zebra software tools available for customizing scanner operation.

- *Chapter 3, Data Capture* provides beeper and LED definitions, techniques involved in scanning bar codes, general instructions and tips about scanning, and decode ranges.

- *Chapter 4, Maintenance & Technical Specifications* provides suggested digital scanner maintenance, troubleshooting, technical specifications, and signal descriptions (pinouts).

- *Chapter 5, User Preferences & Miscellaneous Options* describes each user preference feature and provides programming bar codes for selecting these features.

- *Chapter 6, Signature Capture Preferences* describes signature capture preference features and provides programming bar codes for selecting these features.

- *Chapter 7, USB Interface* describes how to set up the digital scanner with a USB host.

- *Chapter 8, SSI Interface* describes the system requirements of the Simple Serial Interface (SSI), which provides a communications link between Zebra decoders and a serial host.

- *Chapter 9, RS-232 Interface* describes how to set up the digital scanner with an RS-232 host.

- *Chapter 10, IBM 468X / 469X Interface* describes how to set up the digital scanner with an IBM 468X/469X host.

- *Chapter 11, Keyboard Wedge Interface* describes how to set up a keyboard wedge interface with the digital scanner.

- *Chapter 12, Symbologies* describes all symbology features and provides programming bar codes for selecting these features for the digital scanner.

- *Chapter 13, Data Formatting: ADF* briefly describes the Zebra features available for customizing scanner operation.

- *Appendix A, Standard Default Parameters* provides a table of all host devices and miscellaneous scanner defaults.

- *Appendix B, Country Codes* provides bar codes for programming the country keyboard type for the USB keyboard (HID) device and the keyboard wedge host.

- *Appendix C, Country Code Pages* provides bar codes for selecting code pages for the country keyboard type.

- *Appendix D, CKJ Decode Control* describes control parameters for Unicode/CJK (Chinese, Japanese, Korean) bar code decode through USB HID Keyboard Emulation mode.

- *Appendix E, Programming Reference* provides a table of AIM code identifiers, ASCII character conversions, and keyboard maps.

- *Appendix F, Sample Bar Codes* includes sample bar codes of various code types.

- *Appendix G, Numeric Bar Codes* includes the numeric bar codes to scan for parameters requiring specific numeric values.

- *Appendix H, Alphanumeric Bar Codes* includes the alphanumeric bar codes to scan for parameters requiring specific alphanumeric values.

- *Appendix I, ASCII Character Sets* provides ASCII character value tables.

- *Appendix J, Communication Protocol Functionality* lists supported scanner functionality by communication protocol.

- *Appendix K, Signature Capture Code* describes CapCode, a special pattern that encloses a signature area on a document and allows the scanner to capture a signature.

- *Appendix L, Non-Parameter Attributes* defines non-parameter attributes.

Notational Conventions

The following conventions are used in this document:

- Unless stated otherwise, **DS2208** refers to all configurations.

- *Italics* are used to highlight the following:
  - Chapters and sections in this and related documents
  - Dialog box, window and screen names
  - Drop-down list and list box names
  - Check box and radio button names

- **Bold** text is used to highlight the following:
  - Key names on a keypad
  - Button names on a screen.

- bullets (•) indicate:
  - Action items
  - Lists of alternatives
  - Lists of required steps that are not necessarily sequential
- Sequential lists (e.g., those that describe step-by-step procedures) appear as numbered lists.
- Throughout the programming bar code menus, asterisks (*****) are used to denote default parameter settings.

* Indicates Default ———— ***Baud Rate 9600** ——— Feature/Option

Service Information

If you have a problem using the equipment, contact your facility's technical or systems support. If there is a problem with the equipment, they will contact the Zebra Support & Downloads website at: www.zebra.com/support.

When contacting support, please have the following information available:

- Serial number of the unit
- Model number or product name
- Software type and version number

Zebra responds to calls by e-mail, telephone or fax within the time limits set forth in service agreements.

If your problem cannot be solved by support, you may need to return your equipment for servicing and will be given specific directions. Zebra is not responsible for any damages incurred during shipment if the approved shipping container is not used. Shipping the units improperly can possibly void the warranty.

If you purchased your business product from a Zebra business partner, please contact that business partner for support.

Provide Documentation Feedback

If you have comments, questions, or suggestions about this guide, send an email to EVM-Techdocs@zebra.com.

CHAPTER 1 GETTING STARTED

Introduction

2D bar codes have made their way to the Point of Sale (POS), appearing on everything from customer purchased items to printed and electronic coupons and loyalty cards. 1D scanners cannot capture the new 2D codes, leading to exceptions that slow down the check-out process. The DS2208 digital imager scanner scans both 1D and 2D bar codes and does not compromise performance or features.

The DS2208 is easy to deploy, easy to use, and easy to manage - delivering affordable simplicity with its hands-free/hand-held design. The scanner's Intellistand seamlessly accommodates both counter top and hand-held use.
Figure 1-1   *DS2208 Digital Scanner*

Interfaces

The DS2208 digital scanner supports:

- USB connection to a host. The digital scanner automatically detects the USB host interface type and uses the default setting (**USB Keyboard HID**). If the default (*) does not meet your requirements, select another USB interface type by scanning programming bar code menus. See *Appendix B, Country Codes* for the interface supported international keyboards (for Windows® environment).

- Standard RS-232 connection to a host. The digital scanner automatically detects the RS-232 host interface type and uses the default setting (**Standard RS-232**). If the default (*) does not meet your requirements, select another RS-232 interface type by scanning programming bar code menus.

- Connection to IBM 468X/469X hosts. The digital scanner automatically detects the IBM host interface type but does not select a default setting. Scan bar code menus to set up communication of the digital scanner with the IBM terminal.

- Keyboard Wedge connection to a host. The host interprets scanned data as keystrokes. The digital scanner automatically detects the Keyboard Wedge host interface type and uses the default setting (**IBM AT Notebook**). If the default (*) does not meet your requirements, scan *IBM PC/AT & IBM PC Compatibles on page 11-4*. See *Appendix B, Country Codes* for the interface supported international keyboards (for Windows® environment).

- Configuration via 123Scan.

    NOTE For a list of supported scanner functionality by communication protocol, see *Appendix J, Communication Protocol Functionality*.

Unpacking

Remove the digital scanner from its packing and inspect it for damage. If the scanner was damaged in transit, contact support. See *page xx* for information. **KEEP THE PACKING**. It is the approved shipping container; use this to return the equipment for servicing.

Setting Up the Digital Scanner

Installing the Interface Cable

1. Insert the interface cable modular connector into the interface cable port on the rear of the digital scanner until you hear a click.

Cable interface port

Interface cable modular connector clip

Interface cable modular connector

To host
Figure 1-2   *Installing the Cable - DS2208*

> ⚠️ **IMPORTANT**   Insert the cable into the cable interface port until a click sounds.
>
> If you already have existing non shielded cables from legacy products (such as the LS2208) they can be reused. However, be aware that the shielded cables provide improved ESD performance. For regional information about cables and cable compatibility, go to the Zebra Partner Portal at: partnerportal.zebra.com/PartnerPortal/product_services/downloads_z/barcode_scanners/Universal-Cable-Guide-Bar-Code-Scanners.xlsx.

2. Gently tug the cable to ensure the connector is secure.

3. Connect the other end of the interface cable to the host (see the specific host chapter for information on host connections).

Removing the Interface Cable

1. Press the cable's modular connector clip through the access slot in the digital scanner's base.
Figure 1-3   *Removing the Cable*

2. Carefully slide out the cable.
3. Follow the steps for *Installing the Interface Cable* to connect a new cable.

Connecting Power (if required)

If the host does not provide power to the digital scanner, connect an external power supply.

1. Plug the power supply into the power jack on the interface cable.
2. Plug the other end of the power supply into an AC outlet.

Configuring the Digital Scanner

To configure the digital scanner use the bar codes included in this manual, or use the 123Scan[2] configuration program. See *Chapter 5, User Preferences & Miscellaneous Options*, and *Chapter 12, Symbologies* for information about programming the digital scanner using bar code menus. See *Chapter 2, 123Scan and Software Tools* for information on using this configuration program. Also see each host-specific chapter to set up connection to a specific host type.

Accessories

The digital scanner ships with the *DS2208 Quick Start Guide*. The following required accessories must be ordered:

- Interface cable for the appropriate interface. For example, a shielded connector cable when connecting via USB. For regional information about cables and cable compatibility, go to the Zebra Partner Portal at: partnerportal.zebra.com/PartnerPortal/product_services/downloads_z/barcode_scanners/Universal-Cable-Guide-Bar-Code-Scanners.xlsx.

    ✓ **IMPORTANT**   If you already have existing non shielded cables from legacy products (such as the LS2208) they can be reused. However, be aware that the shielded cables provide improved ESD performance.

- Universal power supply, if the interface requires this.
- Gooseneck Intellistand for hands-free operation of the DS2208.

For additional items, contact a local Zebra representative or business partner.

CHAPTER 2 123SCAN AND SOFTWARE TOOLS

Introduction

This chapter briefly describes the Zebra software tools available for customizing scanner operation.

123Scan

123Scan is a software tool that simplifies scanner setup and more.

Intuitive enough for first time users, the 123Scan wizard guides users through a streamlined setup process. Settings are saved in a configuration file that can be printed as a single programming bar code for scanning, emailed to a smart phone for scanning from its screen, or downloaded to the scanner using a USB cable.

Through 123Scan a user can:

- Configure a scanner using a wizard
  - Program the following scanner settings:
    - Beeper tone / volume settings
    - Enable / disable symbologies
    - Communication settings
  - Modify data before transmission to a host using:
    - Advanced Data Formatting (ADF) - Scan one bar code per trigger pull
- Load parameter settings to a scanner via:
  - Bar code scanning:
    - Scan a paper bar code
    - Scan a bar code from a PC screen
    - Scan a bar code from a smart phone screen
  - Download over a USB cable:
    - Load settings to one scanner
    - Stage up to 10 scanners simultaneously

- Validate scanner setup:
  - View scanned data within the utility's Data View screen
  - Capture an image and save to a PC
  - Review settings using the Parameter Report
  - Clone settings from an already deployed scanner
- Upgrade scanner firmware:
  - Load settings to one scanner
  - Stage up to 10 scanners simultaneously with a power USB hub
- Generate the following reports:
  - Parameter Report - Lists parameters programmed within a configuration file
  - Activity Report - Lists activities performed on a scanner(s)
  - Inventory Report - Lists scanner asset tracking information
  - Validation Report - Printout of scanned data

For more information go to: www.zebra.com/123Scan.

Communication with 123Scan

To communicate with the 123Scan program which runs on a host computer running a Windows 7 operating system, use a USB cable to connect the scanner to the host computer.

123Scan Requirements

- Host computer with Windows 7
- Scanner
- USB cable

123Scan Information

For more information on123Scan, go to: www.zebra.com/123Scan

For a 1 minute tour of 123Scan, go to: www.zebra.com/ScannerHowToVideos

To download any of the following free tools, go to: www.zebra.com/scannersoftware

- 123Scan configuration utility (described in this chapter)
- Scanner Control App (available on Android Play, iOS App stores, and Zebra AppGallery)
- How-to-videos

Scanner SDK, Other Software Tools, and Videos

Tackle all your scanner programming needs with our diversified set of software tools. Whether you need to simply stage a device, or develop a fully featured application with image and data capture as well as asset management, these tools help you every step of the way. To download any of the following free tools, go to: www.zebra.com/scannersoftware.

- 123Scan configuration utility (described in this chapter)
- Scanner SDK for Windows
- How-to videos
- Virtual COM port driver
- OPOS driver
- JPOS driver
- Scanner user documentation.

> ✓ **NOTE** For a list of SDK supported scanner functionality by communication protocol, see *Appendix J, Communication Protocol Functionality*.

CHAPTER 3 DATA CAPTURE

Introduction

This chapter provides beeper and LED definitions, techniques involved in scanning bar codes, general instructions and tips about scanning, and decode ranges.

LED

Scan window

Trigger
Figure 3-1 *Parts of the DS2208*

Beeper Definitions

The digital scanner issues different beep sequences and patterns to indicate status. *Table 3-1* defines beep sequences that occur during both normal scanning and while programming the digital scanner.

Table 3-1   *Beeper Definitions*

Beeper Sequence	Indication
Standard Use	
Low/medium/high beeps	Power up.
Short beep, tone programmable	A bar code symbol was decoded (if decode beeper is enabled).
4 long low beeps	Transmission error.
5 low beeps	Conversion or format error.
Low/low/low/extra low beeps	RS-232 receive error.
High beep	The digital scanner detected a <BEL> character over RS-232.
Parameter Menu Scanning	
Low/high beeps	Input error; incorrect bar code, programming sequence, or **Cancel** scanned.
High/low beeps	Keyboard parameter selected. Enter value using numeric bar codes.
High/low/high/low beeps	Successful program exit with change in parameter setting.
ADF Programming	
Low/low beeps	Enter another alphabetic character or scan the **End of Message** bar code.
Low/high/high beeps	All rules are deleted.
Low/high/low/high beeps	Out of rule memory. Erase some existing rules, then try to save rule again.
Low/high/low beeps	Cancel rule entry. Rule entry mode exited because of an error or the user asked to exit rule entry.
Low/high beeps	Entry error, wrong bar code scanned, or criteria/action list is too long for a rule. Re-enter criterion or action.
Low beep	Delete last saved rule. The current rule is left intact.
High/high beeps	ADF criteria or action is expected. Enter another criterion or action, or scan the **Save Rule** bar code.
High/low/low beeps	All criteria or actions cleared for current rule, continue entering rule.
High/low/high/low beeps	Rule saved. Rule entry mode exited.
Macro PDF	
2 low beeps	MPDF sequence buffered.
2 long low beeps	File ID error. A bar code not in the current MPDF sequence was scanned.

Table 3-1   *Beeper Definitions (Continued)*

Beeper Sequence	Indication
3 long low beeps	Out of memory. There is not enough buffer space to store the current MPDF symbol.
4 long low beeps	Bad symbology. Scanned a 1D or 2D bar code in a MPDF sequence, a duplicate MPDF label, a label in an incorrect order, or trying to transmit an empty or illegal MPDF field.
5 long low beeps	Flushing MPDF buffer.
Low/high beeps	Flushing an already empty MPDF buffer.
Fast warble beep	Aborting MPDF sequence.
Host Specific	
USB only	
Low/medium/high beeps upon scanning a USB device type	Communication with the host must be established before the digital scanner can operate at the highest power level.
Low/medium/high beeps occur more than once	The USB host can put the digital scanner in a state where power to the scanner is cycled on and off more than once. This is normal and usually happens when the PC cold boots.
RS-232 only	
1 short high beep	A <BEL> character is received and Beep on <BEL> is enabled.

LED Definitions

In addition to beep sequences, the digital scanner uses a two-color LED to indicate status. *Table 3-2* defines LED colors that display during scanning.

Table 3-2   *Standard LED Definitions*

LED	Indication
Hand-Held Scanning Standard Use	
Green	A bar code was successfully decoded.
Red	Transmission error, conversion or format error, or RS-232 receive error.
Off	No power is applied to the digital scanner, or the scanner is on and ready to scan.
Hands-Free (Presentation) Scanning Standard Use	
Green	The scanner is on and ready to scan.
Momentarily Off	A bar code was successfully decoded.
Red	Transmission error, conversion or format error, or RS-232 receive error.
Off	No power is applied to the digital scanner, or the scanner is in low power mode.
Parameter Programming	
Green	Number expected. Enter value using numeric bar codes. Successful program exit with change in parameter setting.
Red	Input error: incorrect bar code, programming sequence, or Cancel scanned.
Firmware Update	
Red, alternating between solid and fast blinking	Firmware download is completing (user should wait for this indicator to complete before using the scanner). This indicator is followed by a low/medium/high power up beep.
ADF Programming	
Green	Enter another digit. Add leading zeros to the front if necessary. Enter another alphabetic character or scan the **End of Message** bar code. All criteria or actions cleared for current rule, continue entering rule. Delete last saved rule. The current rule is left intact. All rules deleted.
Blinking Green	Enter another criterion or action, or scan the **Save Rule** bar code.
Green after Blinking	Rule saved. Rule entry mode exited. Cancel rule entry. Rule entry mode exited because of an error or the user asked to exit rule entry.
Red	Out of rule memory. Erase some existing rules, then try to save rule again. Entry error, wrong bar code scanned, or criteria/action list is too long for a rule. Re-enter criterion or action.

Scanning

The DS2208 digital scanner is in hands-free (presentation) mode when it is placed in the gooseneck Intellistand. In this mode, the digital scanner operates in continuous (constant-on) mode, where it automatically decodes a bar code presented in its field of view.

When the digital scanner is not used for a user-definable period of time, it enters a low power mode in which the LEDs are turned off or illumination blinks at a low duty cycle until the digital scanner detects an image change (e.g. motion).

Scanning in Hands-Free (Presentation) Mode

The optional stand adds greater flexibility to DS2208 scanning operation. When the scanner is seated in the stand's "cup," the scanner's built-in sensor places the scanner in hands-free (presentation) mode. When the scanner is removed from the stand, it automatically switches to its programmed hand-held triggered mode.

Assemble the Stand

To assemble the stand:

1.   Unscrew the wing nut from the bottom of the one piece scanner "cup."

One piece scanner "cup" with flexible "gooseneck"
Stand base

Wingnut

Figure 3-2   *Assembling the Stand*

2.   Fit the bottom of the gooseneck piece into the opening on the top of the stand base.
3.   Tighten the wing nut underneath the base to secure the cup and neck piece to the base.
4.   Bend the neck to the desired position for scanning.

Mounting the Stand (optional)

You can attach the base of the scanner's stand to a flat surface using two screws or double-sided tape (not provided).

Two screw-mount holes

Double-sided tape areas
(3 places)
dimensions = 1" x 2")
Figure 3-3   *Mounting the Stand*

Screw Mount

1. Position the assembled base on a flat surface.

2. Screw one #10 wood screw into each screw-mount hole until the base of the stand is secure (see *Figure 3-3*).

Tape Mount

1. Peel the paper liner off one side of each piece of tape and place the sticky surface over each of the three rectangular tape holders.

2. Peel the paper liner off the exposed sides of each piece of tape and press the stand on a flat surface until it is secure (see *Figure 3-3*).

Scanning with the Stand

When the digital scanner is placed in the gooseneck Intellistand it operates in continuous (constant-on) mode, where it automatically decodes a bar code presented in its field of view.

To operate the scanner in the stand:

1. Ensure the scanner is properly connected to the host (see the appropriate host chapter for information on host connections).

2. Insert the scanner in the gooseneck Intellistand by placing the front of the scanner into the stand's "cup."
Figure 3-4   *Inserting the Scanner in the Gooseneck Intellistan*d

3. Adjust the scan angle by bending the stand's flexible "gooseneck" body.
4. Present the bar code. Upon successful decode, the scanner beeps and the LED momentarily shuts off. For more information about beeper and LED definitions, see *Table 3-1* and *Table 3-2*.

Scanning in Hand-Held Mode

1. Place the aiming pattern over the bar code. See *Aiming* below.
Figure 3-5   *Aiming Pattern on Bar Code*

2. Press and hold the trigger until either:

    a. The digital scanner reads the bar code. The digital scanner beeps, the LED flashes, and the scan line turns off.

        Or

    b. The digital scanner does not read the bar code and the scan line turns off.

3. Release the trigger.

Aiming

When scanning, the digital scanner projects a red scan line which allows positioning the bar code within its field of view, omnidirectionally. See *Decode Ranges on page 3-8* for the proper distance to achieve between the digital scanner and a bar code.

Figure 3-6   *Scanning Orientation with Aiming Line*

The aiming line is smaller when the digital scanner is closer to the symbol and larger when it is farther from the symbol. Scan symbols with smaller bars or elements (mil size) closer to the digital scanner, and those with larger bars or elements (mil size) farther from the digital scanner.

The digital scanner beeps to indicate that it successfully decoded the bar code. For more information on beeper and LED definitions, see *Table 3-1* and *Table 3-2*.

Decode Ranges

Table 3-3   *DS2208 Typical Decode Ranges*

Bar Code Type	Symbol Density	DS2208 Typical Working Ranges	
		Near (in/cm)	Far (in/cm)
Code 39	5 mil	.2 in/.5 cm	6.0 in/15.2 cm
Code 39	10 mil	.0 in/.0 cm	13.0 in/33.0 cm
Code 128	5 mil	.6 in/1.5 cm	4.0 in/10.2 cm
Code 128	7.5 mil	.0 in/.0 cm	7.0 in/17.8 cm
PDF417	6.7 mil	.8 in/2.0 cm	5.7 in/14.5 cm
UPC	13 mil (100%)	.5 in/1.3 cm	14.5 in/36.8 cm
Data Matrix	10 mil	.3 in/.8 cm	6.2 in/15.7 cm
QR	20 mil	.0 in/.0 cm	11.0 in/27.9 cm
* Printing resolution, contrast, and ambient light dependent.			

CHAPTER 4 MAINTENANCE & TECHNICAL SPECIFICATIONS

Introduction

This chapter provides suggested digital scanner maintenance, troubleshooting, technical specifications, and signal descriptions (pinouts).

Maintenance

⚠️ **IMPORTANT** Use pre-moistened wipes and do not allow liquid cleaner to pool.

Known Harmful Ingredients

The following chemicals are known to damage the plastics on Zebra scanners and should not come in contact with the device:

- Acetone
- Ammonia solutions
- Aqueous or alcoholic alkaline solutions
- Aromatic and chlorinated hydrocarbons
- Benzene
- Carbolic acid
- Compounds of amines or ammonia
- Ethanolamine
- Ethers
- Isopropyl alcohol 70% (including wipes)
- Ketones
- TB-lysoform
- Toluene
- Trichloroethylene.

Approved Cleaners

- Hydrogen peroxide
- Mild dish soap.

Cleaning the Digital Scanner

Routinely cleaning the exit window is required. A dirty window may affect scanning accuracy. Do not allow any abrasive material to touch the window.

To clean the scanner:

1. Dampen a soft cloth with one of the approved cleaning agents listed above or use pre-moistened wipes.

2. Gently wipe all surfaces, including the front, back, sides, top and bottom. Never apply liquid directly to the scanner. Be careful not to let liquid pool around the scanner window, trigger, cable connector or any other area on the device.

3. Be sure to clean the trigger and in between the trigger and the housing (use a cotton-tipped applicator to reach tight or inaccessible areas).

4. Do not spray water or other cleaning liquids directly into the exit window.

5. Wipe the scanner exit window with a lens tissue or other material suitable for cleaning optical material such as eyeglasses.

6. Immediately dry the scanner window after cleaning with a soft non-abrasive cloth to prevent streaking.

7. Allow the unit to air dry before use.

8. Scanner connectors:

    a. Dip the cotton portion of a cotton-tipped applicator in isopropyl alcohol.

    b. Rub the cotton portion of the cotton-tipped applicator back-and-forth across the connector on the Zebra scanner at least 3 times. Do not leave any cotton residue on the connector.

    c. Use the cotton-tipped applicator dipped in alcohol to remove any grease and dirt near the connector area.

    d. Use a dry cotton tipped applicator and rub the cotton portion of the cotton-tipped applicator back-and-forth across the connectors at least 3 times. Do not leave any cotton residue on the connectors.

Troubleshooting

Table 4-1   *Troubleshooting*

Problem	Possible Causes	Possible Solutions
The aiming pattern does not appear when pressing the trigger.	No power to the digital scanner.	If the configuration requires a power supply, re-connect the power supply.
	Incorrect host interface cable is used.	Connect the correct host interface cable.
	Interface/power cables are loose.	Re-connect cables.
	Digital scanner is disabled.	For IBM 468x and USB IBM Hand-held, IBM Table-Top, and OPOS modes, enable the digital scanner via the host interface. Otherwise, see the technical person in charge of scanning.
	If using RS-232 Nixdorf B mode, CTS is not asserted.	Assert CTS line.
	Aiming pattern is disabled.	Enable the aiming pattern. See *Hand-Held Decode Aiming Pattern on page 5-17*.
Digital scanner emits aiming pattern, but does not decode the bar code.	Digital scanner is not programmed for the correct bar code type.	Program the digital scanner to read that type of bar code. See *Chapter 12, Symbologies*.
	Bar code symbol is unreadable.	Scan test symbols of the same bar code type to determine if the bar code is defaced.
	The symbol is not completely inside aiming pattern.	Move the symbol completely within the aiming pattern. Move the symbol completely within the field of view (AIM pattern does NOT define FOV)
	Distance between digital scanner and bar code is incorrect.	Move the scanner closer to or further from the bar code. See *Decode Ranges on page 3-8*.

Table 4-1   *Troubleshooting (Continued)*

Problem	Possible Causes	Possible Solutions
Digital scanner decodes bar code, but does not transmit the data to the host.	Digital scanner is not programmed for the correct host type.	Scan the appropriate host type programming bar code. See the chapter corresponding to the host type.
	Interface cable is loose.	Re-connect the cable.
	If the digital scanner emits 4 long low beeps, a transmission error occurred. This occurs if a unit is not properly configured or connected to the wrong host type.	Set the scanner's communication parameters to match the host's setting.
	If the digital scanner emits 5 low beeps, a conversion or format error occurred.	Configure the digital scanner's conversion parameters properly.
	If the digital scanner emits low/high/low beeps, it detected an invalid ADF rule.	Program the correct ADF rules. Refer to the *Advanced Data Formatting Programmer Guide.*
Host displays scanned data incorrectly.	Digital scanner is not programmed to work with the host.	Scan the appropriate host type programming bar code.
		For RS-232, set the digital scanner's communication parameters to match the host's settings.
		For a Keyboard Wedge configuration, program the system for the correct keyboard type, and turn off the CAPS LOCK key.
		Program the proper editing options (e.g., UPC-E to UPC-A Conversion).
Digital scanner emits short low/short medium/short high beep sequence (power-up beep sequence) more than once.	The USB bus may put the digital scanner in a state where power to the scanner is cycled on and off more than once.	Normal during host reset.
Digital scanner emits 4 short high beeps during decode attempt.	Digital scanner has not completed USB initialization.	Wait several seconds and scan again.
Digital scanner emits Low/low/low/extra low beeps when not in use.	RS-232 receive error.	Normal during host reset. Otherwise, set the digital scanner's RS-232 parity to match the host setting.
Digital scanner emits low/high beeps during programming.	Input error, incorrect bar code or **Cancel** bar code was scanned.	Scan the correct numeric bar codes within range for the parameter programmed.

Table 4-1   *Troubleshooting (Continued)*

Problem	Possible Causes	Possible Solutions
Digital scanner emits low/high/low/high beeps during programming.	Out of host parameter storage space.	Scan *Default Parameters on page 5-5*.
	Out of memory for ADF rules.	Reduce the number of ADF rules or the number of steps in the ADF rules.
	During programming, indicates out of ADF parameter storage space.	Erase all rules and re-program with shorter rules.
Digital scanner emits low/high/low beeps.	ADF transmit error.	Refer to the Advanced Data Formatting Guide for information.
	Invalid ADF rule is detected.	Refer to the Advanced Data Formatting Guide for information.
Digital scanner emits a power-up beep after changing USB host type.	The USB bus re-established power to the digital scanner.	Normal when changing USB host type.
Digital scanner emits one high beep when not in use.	In RS-232 mode, a <BEL> character was received and Beep on <BEL> option is enabled.	Normal when **Beep on <BEL>** is enabled and the digital scanner is in RS-232 mode.
Digital scanner emits frequent beeps.	No power to the scanner.	Check the system power. If the configuration requires a power supply, re-connect the power supply.
	Incorrect host interface cable is used.	Verify that the correct host interface cable is used. If not, connect the correct host interface cable.
	Interface/power cables are loose.	Check for loose cable connections and re-connect cables.
Digital scanner emits five long low beeps after a bar code is decoded.	Conversion or format error was detected. The scanner's conversion parameters are not properly configured.	Ensure the scanner's conversion parameters are properly configured.
	Conversion or format error was detected. An ADF rule was set up with characters that can't be sent for the host selected.	Change the ADF rule, or change to a host that can support the ADF rule.
	Conversion or format error was detected. A bar code was scanned with characters that can't be sent for that host.	Change the bar code, or change to a host that can support the bar code.

✓ **NOTE** If after performing these checks the digital scanner still experiences problems, contact the distributor or call support.

Report Software Version Bar Code

When contacting support, a support representative may ask you to scan the bar code below to determine the version of software installed in the digital scanner.
Report Software Version

Technical Specifications

Table 4-2 *Technical Specifications*

Item	Description
Physical Characteristics	
Dimensions	6.5 in H x 2.6 in W x 3.9 in D
	16.5 cm H x 6.6 cm W x 9.8 cm D
Weight	5.7 oz. / 161.6 g
Input Voltage Range	4.5 to 5.5 VDC Host Powered; 4.5 to 5.5 VDC External Power Supply
Operating Current at Nominal Voltage (5.0V)	250 mA (typical).
	Note: Auto-Aim and Illumination on Acquiring Image
Standby Current (idle) at Nominal Voltage (5.0V)	150 mA (typical).
	Note: Auto-Aim On
Color	Nova White, Twilight Black
Supported Host Interfaces	USB, RS232, Keyboard Wedge, TGCS (IBM) 46XX over RS-485
USB Certification	DS2208 is USB2.0 Full Speed Compliant, visit USB.org for more details.
Keyboard Support	Supports over 90 international keyboards
User Indicators	Direct Decode Indicator, Good Decode LEDs, Rear View LEDs, Beeper (adjustable tone & volume)
Performance Characteristics	
Motion Tolerance (Hand-Held)	Up to 5 in/13 cm per second for 13 mil UPC

Table 4-2   *Technical Specifications (Continued)*

Item	Description
Swipe Speed (Hands-Free)	Up to 30.0 in/76.2 cm per second for 13 mil UPC
Light Source	Aiming Pattern: Linear 624nm Amber LED
Illumination	(2) 645nm Super-Red LEDs
Imager Field of View	32.8° H x 24.8° V Nominal
Image Sensor	640 x 480 pixels
Minimum Print Contrast	25% minimum reflective difference
Skew Tolerance	+/- 65°
Pitch Tolerance	+/- 65°
Roll Tolerance	0° - 360°
User Environment	
Operating Temperature	32.0° to 122.0° F / 0.0° to 50.0° C
Storage Temperature	-40.0° to 158.0° F / -40.0° to 70.0° C
Humidity	5% to 95% RH, non-condensing
Drop Specification	Designed to withstand multiple drops at 5.0 ft. /1.5 m to concrete
Tumble Specification	Designed to withstand 250 tumbles in 1.5 ft./.5 m tumbler **Note**: 1 tumble = 0.5 cycle.
Environmental Sealing	IP52
Electrostatic Discharge (ESD)	ESD per EN61000-4-2, +/-15 KV Air, +/-8 KV Direct, +/-8 KV Indirect
Ambient Light Immunity	0 to 10,000 Foot Candles / 0 to 107,600 Lux
Accessories	
Gooseneck Intellistand	Stand for Hands-Free use
Symbol Decode Capability	
1D	Code 39, Code 128, Code 93, Codabar/NW7, Code 11, MSI Plessey, UPC/EAN, I 2 of 5, Korean 3 of 5, GS1 DataBar, Base 32 (Italian Pharma)

CHAPTER 5 USER PREFERENCES & MISCELLANEOUS OPTIONS

Introduction

You can program the scanner to perform various functions, or activate different features. This chapter describes user preference features and provides programming bar codes for selecting these features.

The scanner ships with the settings shown in *Table 5-1 on page 5-2* (also see *Appendix A, Standard Default Parameters* for all defaults). If the default values suit requirements, programming is not necessary.

Setting Parameters

To set feature values, scan a single bar code or a short bar code sequence. The settings are stored in non-volatile memory and are preserved even when the scanner powers down.

> ✓ **NOTE** Most computer monitors allow scanning bar codes directly on the screen. When scanning from the screen, be sure to set the document magnification to a level where you can see the bar code clearly, and bars and/or spaces do not merge.

If not using the default host, select the host type (see each host chapter for specific host information) after the power-up beeps sound. This is only necessary upon the first power-up when connected to a new host.

To return all features to default values, see *Default Parameters on page 5-5*. Throughout the programming bar code menus, asterisks indicate (*) default values.

* Indicates default   ***Enable Parameter**
                      (1)   Feature/option

                                              Option value

Scanning Sequence Examples

In most cases, scanning one bar code sets the parameter value. For example, to set the beeper tone to high, scan the **High Frequency** (beeper tone) bar code listed under *Beeper Tone on page 5-8*. The scanner issues a fast warble beep and the LED turns green, signifying a successful parameter entry.

Other parameters, such as **Serial Response Time-Out** or **Data Transmission Formats**, require scanning several bar codes. See the parameter descriptions for this procedure.

Errors While Scanning

Unless otherwise specified, to correct an error during a scanning sequence, just re-scan the correct parameter.

User Preferences/Miscellaneous Options Parameter Defaults

Table 5-1 lists defaults for user preferences parameters. Change these values in one of two ways:

- Scan the appropriate bar codes in this chapter. The new value replaces the standard default value in memory. To recall default parameter values, see *Default Parameters on page 5-5*.

- Configure the scanner using the 123Scan^2 configuration program. See *Chapter 2, 123Scan and Software Tools*.

✓ **NOTE** See *Appendix A, Standard Default Parameters* for all user preference, host, symbology, and miscellaneous default parameters.

Table 5-1   *User Preferences Parameter Defaults*

Parameter	Parameter Number [1]	SSI Number [2]	Default	Page Number
User Preferences				
Set Default Parameter			N/A	5-5
Parameter Bar Code Scanning	236	ECh	Enable	5-6
Beep After Good Decode	56	38h	Enable	5-6
Beeper Volume	140	8Ch	High	5-7
Beeper Tone	145	91h	Medium	5-8
Beeper Duration	628	F1h 74h	Medium	5-9
Suppress Power Up Beeps	721	F1h D1h	Do Not Suppress	5-9
LED on Good Decode	744	F1h E8h	Enable	5-10
Direct Decode Indicator	859	F2h 5Bh	Disable	5-11
Low Power Mode	128	80h	Disable	5-12
Time Delay to Low Power Mode	146	92h	1 Hour	5-13

1. Parameter number decimal values are used for programming via RSM commands.
2. SSI number hex values are used for programming via SSI commands.

Table 5-1   *User Preferences Parameter Defaults (Continued)*

Parameter	Parameter Number [1]	SSI Number [2]	Default	Page Number
Trigger Mode (or Hand-Held Trigger Mode)	138	8Ah	Auto Aim	*5-15*

User Preferences

Default Parameters

Scan one of the following bar codes to reset the scanner to its default settings as follows:

- **Restore Defaults** resets all default parameters as follows:
  - If you configured custom default parameter values via the **Write to Custom Defaults** bar code, scanning the **Restore Defaults** bar code restores these custom values.
  - If you did not configure custom default parameter values, scanning the **Restore Defaults** bar code restores the factory default values. See *Appendix A, Standard Default Parameters* for these values.
- **Set Factory Defaults** clears all custom default values and sets the factory default values. See *Appendix A, Standard Default Parameters* for these values.

Write to Custom Defaults

To create a set of custom defaults, select the desired parameter values in this guide, and then scan **Write to Custom Defaults**.

Restore Defaults

Set Factory Defaults

Write to Custom Defaults

Parameter Bar Code Scanning

Parameter # 236
SSI # ECh

Scan one of the following bar codes to select whether to enable or disable the decoding of parameter bar codes, including the **Set Defaults** bar codes.

*Enable Parameter Bar Code Scanning
(1)

Disable Parameter Bar Code Scanning
(0)

Beep After Good Decode

Parameter # 56
SSI # 38h

Scan one of the following bar codes to select whether or not the scanner beeps after a good decode.
If you select **Disable Beep After Good Decode**, the beeper still operates during parameter menu scanning and to indicate error conditions.

*Enable Beep After Good Decode
(1)

Disable Beep After Good Decode
(0)

Beeper Volume

Parameter # 140
SSI # 8Ch

Scan one of the following bar codes to select a beeper volume.

Low Volume
**(2)**

Medium Volume
(1)

***High Volume**
(0)

Beeper Tone

Parameter # 145
SSI # 91h

Scan one of the following bar codes to select a beeper tone for the good decode beep.

Disable Tone
(3)
Low Tone
(2)
*Medium Tone
(1)
High Tone
(0)

Medium to High Tone (2-tone)
(4)

Beeper Duration

Parameter # 628
SSI # F1h 74h

Scan one of the following bar codes to select the duration for the good decode beep.
Short Duration
(0)
***Medium Duration**
(1)
Long Duration
(2)

Suppress Power Up Beeps

Parameter # 721
SSI # F1h D1h

Scan one of the following bar codes to select whether or not to suppress the scanner's power-up beeps.

***Do Not Suppress Power Up Beeps**
(0)

Suppress Power Up Beeps
(1)

LED on Good Decode

Parameter # 744
SSI # F1h E8h

Scan one of the following bar codes to select whether or not the LED blinks on a good decode.

*Enable LED on Good Decode
(2)

Disable LED on Good Decode
(0)

Direct Decode Indicator

Parameter # 859
SSI # F2h 5Bh

This parameter is only supported in Auto Aim and Standard (Level) *Trigger Mode*. Scan one of the following bar codes to select optional blinking of the illumination on a successful decode. You must continue to hold the trigger upon decode to see the illumination blink. If you release the trigger upon decode, the blinking does not occur.If you release the trigger upon decode, the blinking does not occur. This allows you to choose additional feedback for a successful decode by holding the trigger, or to continue to scan as normal.

- ***Disable Direct Decode Indicator** - Illumination does not blink on a successful decode.
- **1 Blink** - Illumination blinks once upon a successful decode.
- **2 Blinks** - Illumination blinks twice upon a successful decode.

*Disable Direct Decode Indicator
(0)

1 Blink
(1)
2 Blinks
(2)

Low Power Mode

Parameter # 128
SSI # 80h

> **NOTE** The Low Power Mode parameter only applies for non-USB and non-RS485 host interfaces, and when *Trigger Mode on page 5-15* is set to **Level (Standard)**.

Scan one of the following bar codes to select whether or not the scanner enters low power mode after a decode attempt or host communication. This applies to serial and keyboard wedge connections. If disabled, power remains on after each decode attempt.

If you enable this, see *Time Delay to Low Power Mode* to set the inactivity time period.

Enable Low Power Mode
(1)

*Disable Low Power Mode
(0)

Time Delay to Low Power Mode

Parameter # 146

SSI # 92h

✓ *NOTE* This parameter only applies when *Low Power Mode* is enabled.

Scan one of the following bar codes to set the time the scanner remains active before entering low power mode. The scanner wakes upon trigger press or when the host attempts to communicate with the scanner.

**1 Second
(17)**

**10 Seconds
(26)**

**1 Minute
(33)**

**5 Minutes
(37)**

**15 Minutes
(43)**

Time Delay to Low Power Mode (continued)

*1 Hour
(49)
3 Hours
(51)

6 Hours
(54)

9 Hours
(57)

Trigger Mode

Parameter # 138
SSI # 8Ah

Scan one of the following bar codes to select a trigger mode for the scanner:

- **Standard (Level)** - A trigger press activates decode processing. Decode processing continues until the bar code decodes, you release the trigger, or the *Decode Session Timeout on page 5-21* occurs.

- **Presentation (Blink)** - The scanner activates decode processing when it detects a bar code in its field of view. After a period of non-use, the scanner illumination and aimer settings change according to the default *Low Light Scene Detection* setting. The scanner re-activates decode processing when the scanner senses motion.

- ***Auto Aim** - The scanner projects the aiming pattern when lifted. A trigger press activates decode processing. After two seconds of inactivity the aiming pattern shuts off.
Standard (Level)
(0)

Presentation (Blink)
(7)

*Auto Aim
(9)

Hands-Free Mode

Parameter # 630
SSI # F1h 76h

Scan one of the following bar codes to enable or disable hands-free mode:

- **Enable Hands-Free Mode** - When you place the scanner in a stand, it automatically triggers when presented with a bar code. Lifting the scanner or pulling the trigger causes it to behave according to the setting of the *Trigger Mode on page 5-15*.

- **Disable Hands-Free Mode** - The scanner behaves according to the setting of the *Trigger Mode on page 5-15* regardless of whether it is hand-held or in stand.

*Enable Hands-Free Mode
(1)
Disable Hands-Free Mode
(0)

Hand-Held Decode Aiming Pattern

Parameter # 306
SSI # F0h 32h

Scan one of the following bar codes to select when to project the aiming pattern in hand-held mode:

- **Enable Hand-Held Decode Aiming Pattern** - This projects the aiming pattern during bar code capture.

- **Disable Hand-Held Decode Aiming Pattern** - This turns the aiming pattern off.

- **Enable Hand-Held Decode Aiming Pattern on PDF** - This projects the aiming pattern when the scanner detects a PDF bar code.

✓ *NOTE* With *Picklist Mode on page 5-19* enabled, the decode aiming pattern flashes even if you disable the **Hand-Held Decode Aiming Pattern**.

*Enable Hand-Held Decode Aiming Pattern
(2)
Disable Hand-Held Decode Aiming Pattern
(0)
Enable Hand-Held Decode Aiming Pattern on PDF
(3)

## Hands-Free (Presentation) Decode Aiming Pattern

Parameter # 590
SSI # F1h 4Eh

Scan one of the following bar codes to select when to project the aiming pattern in hands-free mode:

- **Enable Hands-Free (Presentation) Decode Aiming Pattern** - This projects the aiming pattern during bar code capture.

- **Disable Hands-Free (Presentation) Decode Aiming Pattern** - This turns the aiming pattern off.

- **Enable Hands-Free (Presentation) Decode Aiming Pattern on PDF** - This projects the aiming pattern when the scanner detects a PDF bar code.

✓ *NOTE* With *Picklist Mode on page 5-19* enabled, the decode aiming pattern flashes even when you disable the **Hands-Free Decode Aiming Pattern**.

Enable Hands-Free (Presentation)
Decode Aiming Pattern
(1)

Disable Hands-Free (Presentation)
Decode Aiming Pattern
(0)

*Enable Hands-Free (Presentation)
Decode Aiming Pattern on PDF
(2)

Picklist Mode

Parameter # 402
**SSI # F0h 92h**

Scan one of the following bar codes to select a Picklist Mode. In this mode, you can pick out and decode a bar code from a group of bar codes that are printed close together by placing the aiming pattern on the bar code you want to decode.

NOTE Enabling Picklist Mode overrides the Disable Decode Aiming Pattern options. You can not disable the decode aiming pattern when Picklist Mode is enabled.

Enabling Picklist Mode can slow decode speed and hinder the ability to decode longer bar codes.

- **Enable Picklist Mode Always** - Picklist Mode is always enabled.
- **Enable Picklist Mode in Hand-Held Mode** - Picklist Mode is enabled when the scanner is out of hands-free mode and disabled when the scanner is in presentation mode.
- **Enable Picklist Mode in Hands-Free Mode** - Picklist Mode is enabled when the scanner is in hands-free mode only.
- **Disable Picklist Mode Always** - Picklist Mode is always disabled.

Enable Picklist Mode Always
(2)

Enable Picklist Mode in Hand-Held Mode
(1)

Enable Picklist Mode in Hands-Free Mode
(3)

*Disable Picklist Mode Always
(0)

Continuous Bar Code Read

Parameter # 649
SSI # F1h 89h

Scan **Enable Continuous Bar Code Read** to report every bar code while the trigger is pressed.

✓ **NOTE** We strongly recommend enabling *Picklist Mode on page 5-19* with this parameter. Disabling Picklist Mode can cause accidental decodes when more than one bar code is in the scanner's field of view.

Enable Continuous Bar Code Read
(1)
*Disable Continuous Bar Code Read
**(0)**

Unique Bar Code Reporting

Parameter # 723
SSI # F1h D3h

Scan **Enable Continuous Bar Code Read Uniqueness** to report only unique bar codes while the trigger is pressed. This option only applies when *Continuous Bar Code Read* is enabled.

*Enable Unique Bar Code Reporting
(1)

Disable Unique Bar Code Reporting
(0)

Decode Session Timeout

Parameter # 136
SSI # 88h

This parameter sets the maximum time decode processing continues during a scan attempt. It is programmable in 0.1 second increments from 0.5 to 9.9 seconds. The default timeout is 9.9 seconds.

To set a Decode Session Timeout, scan the following bar code, and then scan two bar codes from *Appendix G, Numeric Bar Codes* that correspond to the desired on time. Enter a leading zero for single digit numbers. For example, to set a Decode Session Timeout of 0.5 seconds, scan this bar code, and then scan the **0** and **5** bar codes. To correct an error or change the selection, scan *Cancel on page G-3*.

Decode Session Timeout

Hands-Free Decode Session Timeout

Parameter # 400
SSI # F0 90

This parameter is the hands-free compliment to the **Decode Session Timeout**. It configures the minimum and maximum decode processing time during a hands-free scan attempt. It only applies to the hands-free trigger mode or when a scanner is place in the gooseneck stand. The default is 15; range = 2 - 255.

The minimum decode processing time is defined as the time in which the scanner stops decoding when an object is removed or left stationary in the imaging field of view.

The maximum decode processing time is defined as the time in which the scanner stops decoding when an object is left in or is moving in the field of view.

Both the maximum and minimum times are configured using a single setting. The relationship of this setting is as follows:

Setting Value[1]	Minimum Time	Maximum Time
X < 25	250 ms	2.5 Seconds
X >= 25	X * 10 ms	X * 100 ms
[1]Setting value must be three digits.		

For example, a setting value of 100 results in the scanner turning off approximately 1 second after an object is removed from the field of view or 10 seconds while an object is in the field of view moving.

The default value of the setting is 15 which results in a minimum time of 250 ms and maximum time of 2.5 seconds.

Adjust this setting based on your requirements. For example, when doing PDF prioritization, this parameter should be set to a value where the maximum time is above the PDF prioritization timeout.

To set a three digit value scan the following bar code, and then scan three bar codes from *Appendix G, Numeric Bar Codes*. Enter a leading zero for single digit numbers. To correct an error or change a selection, scan *Cancel on page G-3*.

Hands-Free Decode Session Timeout

Timeout Between Decodes, Same Symbol

Parameter # 137
SSI # 89h

Use this option in presentation mode or *Continuous Bar Code Read* mode to prevent the scanner from continuously decoding the same bar code when it is left in the scanner's field of view. The bar code must be out of the field of view for the timeout period before the scanner reads the same consecutive symbol. It is programmable in 0.1 second increments from 0.0 to 9.9 seconds. The default interval is 0.5 seconds.

To select the timeout between decodes for the same symbol, scan the following bar code, and then scan two bar codes from *Appendix G, Numeric Bar Codes* that correspond to the desired interval, in 0.1 second increments.

Timeout Between Decodes, Same Symbol

Timeout Between Decodes, Different Symbols

Parameter # 144
SSI # 90h

Use this option in presentation mode or *Continuous Bar Code Read* to control the time the scanner waits before decoding a different symbol. It is programmable in 0.1 second increments from 0.1 to 9.9 seconds. The default is 0.1 seconds.

To select the timeout between decodes for different symbols, scan the following bar code, and then scan two bar codes from *Appendix G, Numeric Bar Codes* that correspond to the desired interval, in 0.1 second increments..

✓ **NOTE** Timeout Between Decodes, Different Symbols cannot be greater than or equal to the *Decode Session Timeout*.

Timeout Between Decodes, Different Symbols

Decode Mirror Images (Data Matrix Only)

Parameter # 537
SSI # F1h 19h

Select an option for decoding mirror image Data Matrix bar codes:

- Always - decode only Data Matrix bar codes that are mirror images
- Never - do not decode Data Matrix bar codes that are mirror images
- Auto - decode both mirrored and unmirrored Data Matrix bar codes.

**Never
(0)**

**Always
(1)**

***Auto
(2)**

Mobile Phone/Display Mode

✓ ***NOTE*** Reading bar codes on mobile phones does not require a special mode of operation.

PDF Prioritization

Parameter # 719
SSI # F1h CFh

Scan **Enable PDF Prioritization** to delay decoding certain 1D bar codes (see *Note* below) by the value specified in *PDF Prioritization Timeout*. During that time the scanner attempts to decode a PDF417 symbol (e.g., on a US driver's license), and if successful, reports this only. If it does not decode (can not find) a PDF417 symbol, it reports the 1D symbol after the timeout. The 1D symbol must be in the device's field of view for the scanner to report it. This parameter does not affect decoding other symbologies.

✓ **NOTE**

The 1D Code 128 bar code lengths include the following:

- 7 to 10 characters
- 14 to 22 characters
- 27 to 28 characters

In addition, a Code 39 bar code with the following lengths are considered to potentially be part of a US driver's license:

- 8 characters
- 12 characters

**Enable PDF Prioritization
(1)**

***Disable PDF Prioritization
(0)**

PDF Prioritization Timeout

Parameter # 720
SSI # F1h D0h

If you enabled *PDF Prioritization*, set this timeout to indicate how long the scanner attempts to decode a PDF417 symbol before reporting the 1D bar code in the field of view.

Scan the following bar code, and then scan four bar codes from *Appendix G, Numeric Bar Codes* that specify the timeout in milliseconds. For example, to enter 400 ms, scan the following bar code, and then scan 0400. The range is 0 to 5000 ms, and the default is 200 ms.

PDF Prioritization Timeout

Decoding Illumination

Parameter # 298
SSI # F0h 2Ah

Scan one of the following bar codes to determine whether the scanner turns on illumination to aid decoding. Enabling illumination usually results in superior images and better decode performance. The effectiveness of the illumination decreases as the distance to the target increases.

***Enable Decoding Illumination
(1)**

**Disable Decoding Illumination
(0)**

Illumination Brightness

Parameter # 669
SSI # F1h 9Dh

Scan one of the following bar codes to set the illumination brightness used during an active decode session. This only applies in hand-held mode (not in presentation mode).

NOTE Selecting a lower brightness level can affect decode performance.

**Low Illumination Brightness
(2)**

**Medium Illumination Brightness
(4)**

***High Illumination Brightness
(8)**

Low Light Scene Detection

Parameter # 810
SSI # F2h 2Ah

Scan one of the following bar codes to allow the scanner to detect motion in dim to dark illumination environments when in presentation mode:

- **No Low Light Scene Detection** - The scanner attempts to detect motion as best it can with the aim pattern and illumination turned off when the scanner is idle.

- **Aiming Pattern Low Light Assist Scene Detection** - Illumination is off, but the aim pattern is on when the scanner is idle to assist in scene detection.

- **Dim Illumination Low Light Assist Scene Detection** - The aim pattern is off, but illumination is on at a dim level to assist in scene detection.

No Low Light Assist Scene Detection
(0)

Aiming Pattern Low Light Assist Scene Detection
(1)

*Dim Illumination Low Light Assist Scene Detection
(2)

Motion Tolerance (Hand-Held Trigger Modes Only)

Parameter # 858
SSI # F2h 5Ah

Scan one of the following bar codes to select a motion tolerance option:

- **Less Motion Tolerance** - This provides optimal decoding performance on 1D bar codes.
- **More Motion Tolerance** - This increases motion tolerance and speeds decoding when scanning a series of 1D bar codes in rapid progression.
*Less Motion Tolerance
(0)

More Motion Tolerance
(1)

Product ID (PID) Type

Parameter # 1281
SSI # F8h 05h 01h

Scan one of the following bar codes to define the PID value reported in USB enumeration.

*Host Type Unique
(0)

Product Unique
(1)

IBM Unique
(2)

Product ID (PID) Value

Parameter # 1725
SSI # F8h 06h BDh

To set a Product ID value, scan **Set PID Value**, and then scan four numeric barcodes in *Appendix G, Numeric Bar Codes* that correspond to the value. Enter a leading zero for single digit numbers. To correct an error, or change a selection, scan *Cancel on page G-3*. The range is (0,1600-1649).

✓ **NOTE** This parameter is applicable to customers using a Firmware Flash Update per the Toshiba Global Commerce Solutions (TGCS) Universal Serial Bus OEM Point-of-Sale Device Interface.

Set PID Value

ECLevel

Parameter # 1710
SSI # F8h 06h AEh

To set an ECLevel value, scan **Set ECLevel**, and then scan five numeric barcodes in *Appendix G, Numeric Bar Codes* that correspond to the desired level. Enter a leading zero for single digit numbers. To correct an error, or change a selection, scan *Cancel on page G-3*.

✓ **NOTE** This parameter is applicable to customers using a Firmware Flash Update per the Toshiba Global Commerce Solutions (TGCS) Universal Serial Bus OEM Point-of-Sale Device Interface. It allows a customer to define an ECLevel value in order to manage and control Flash Update operations on the 4690 operating system.

Contact the Zebra Customer Support Center online at: www.zebra.com/support for more information.

Set ECLevel

Miscellaneous Scanner Parameters
Enter Key

Scan the following bar code to add an Enter key (carriage return/line feed) after scanned data.
To program other prefixes and/or suffixes, see *Prefix/Suffix Values on page 5-31.*

Add Enter Key (Carriage Return/Line Feed)

Tab Key

Scan the following bar code to add a Tab key after scanned data.

**Tab Key**

Transmit Code ID Character

Parameter # 45
SSI # 2Dh

A Code ID character identifies the code type of a scanned bar code. This is useful when decoding more than one code type. In addition to any single character prefix selected, the Code ID character is inserted between the prefix and the decoded symbol.

Select no Code ID character, a Symbol Code ID character, or an AIM Code ID character. For Code ID characters, see *Symbol Code Identifiers on page E-1* and *AIM Code Identifiers on page E-3*.
> ✓ **NOTE** If you enable Symbol Code ID Character or AIM Code ID Character, and enable *Transmit "No Read" Message on page 5-35*, the scanner appends the code ID for Code 39 to the NR message.
Symbol Code ID Character
(2)

AIM Code ID Character
(1)

*None
(0)

Prefix/Suffix Values

Key Category Parameter # P = 99, S1 = 98, S2 = 100
SSI # P = 63h, S1 = 62h, S2 = 64h
**Decimal Value Parameter # P = 105, S1 = 104, S2 = 106**
SSI # P = 69h, S1 = 68h, S2 = 6Ah

You can append a prefix and/or one or two suffixes to scan data for use in data editing. To set a value for a prefix or suffix, scan one of the following bar codes, and then scan four bar codes from *Appendix G, Numeric Bar Codes* that correspond to that value. See *Appendix I, ASCII Character Sets* for the four-digit codes.

When using host commands to set the prefix or suffix, set the key category parameter to 1, and then set the 3-digit decimal value. See *Appendix I, ASCII Character Sets* for the four-digit codes.

The default prefix and suffix value is 7013 <CR><LF> (Enter key). To correct an error or change a selection, scan *Cancel on page G-3*.

NOTE To use Prefix/Suffix values, first set the *Scan Data Transmission Format on page 5-32*.
Scan Prefix
(7)

Scan Suffix 1
(6)

Scan Suffix 2
(8)

Data Format Cancel

Scan Data Transmission Format

Parameter # 235
SSI # EBh

To change the scan data format, scan one of the following bar codes corresponding to the desired format.

✓ **NOTE** If using this parameter do not use ADF rules to set the prefix/suffix.

To set values for the prefix and/or suffix, see *Prefix/Suffix Values on page 5-31*.

(7)

FN1 Substitution Values

Key Category Parameter # 103
Key Category SSI # 67h
**Decimal Value Parameter # 109**
Decimal Value SSI # 6Dh

Keyboard wedge and USB HID keyboard hosts support a FN1 substitution feature. Enabling this substitutes any FN1 character (0x1b) in an EAN128 bar code with a value. This value defaults to 7013 <CR><LF> (Enter key).

When using host commands to set the FN1 substitution value, set the key category parameter to 1, and then set the 3-digit keystroke value. See the ASCII Character Set table for the current host interface for the desired value.

To select a FN1 substitution value via bar code menus:

1. Scan the following bar code.
Set FN1 Substitution Value

2. Locate the keystroke desired for FN1 Substitution in the ASCII Character Set table for the current host interface, and enter the 4-digit ASCII value by scanning four bar codes from *Appendix G, Numeric Bar Codes*.

To correct an error or change the selection, scan **Cancel**.

To enable FN1 substitution for USB HID keyboard, scan the **Enable FN1 Substitution** bar code on page .

Transmit "No Read" Message

Parameter # 94
SSI # 5Eh

Scan one of the following bar codes to set an option for transmitting the No Read (NR) characters:

> ✓ **NOTE** If you enable **Transmit No Read**, and also enable Symbol Code ID Character or AIM Code ID Character for *Transmit Code ID Character on page 5-30*, the scanner appends the code ID for Code 39 to the NR message.

> ✓ **NOTE** This does not apply in presentation mode.

- **Enable No Read** - This transmits the characters NR when a successful decode does not occur before trigger release or the **Decode Session Timeout** expires. See *Decode Session Timeout on page 5-21*.

- **Disable No Read** - This sends nothing to the host if a symbol does not decode.

Enable No Read
(1)

*Disable No Read
(0)

Unsolicited Heartbeat Interval

Parameter # 1118
SSI # F8h 04h 5Eh

The scanner can send unsolicited heartbeat messages to assist in diagnostics. To enable this parameter and set the desired unsolicited heartbeat interval, scan one of the following time interval bar codes, or scan **Set Another Interval** followed by four bar codes from *Appendix G, Numeric Bar Codes* that correspond to the desired number of seconds. The range is 0 - 9999.

Scan **Disable Unsolicited Heartbeat Interval** to turn off the feature.

The heartbeat event is sent as decode data (with no decode beep) in the form of:

MOTEVTHB:nnn

where **nnn** is a three-digit sequence number starting at 001 and wrapping after 100.

10 Seconds
(10)

Manufacturing Information

CHAPTER 6 SIGNATURE CAPTURE PREFERENCES

Introduction

You can program the digital scanner to perform various functions, or activate different features. This chapter describes signature capture preference features and provides programming bar codes for selecting these features.

The digital scanner ships with the settings shown in *Table 6-1 on page 6-2* (also see *Appendix A, Standard Default Parameters* for all defaults). If the default values suit requirements, programming is not necessary.

✓ **NOTE** Although the DS2208 digital scanner supports signature capture, the quality of the image is not guaranteed. If the image does not meet your needs it is recommended that you upgrade to a DS4308 or DS8108 scanner.

Setting Parameters

To set feature values, scan a single bar code or a short bar code sequence. The settings are stored in non-volatile memory and are preserved even when the imager powers down.

✓ **NOTE** Most computer monitors allow scanning bar codes directly on the screen. When scanning from the screen, be sure to set the document magnification to a level where you can see the bar code clearly, and bars and/or spaces do not merge.

To return all features to default values, scan the *Set Factory Defaults on page 5-5*. Throughout the programming bar code menus, asterisks (*) indicate default values.

* Indicates default   ***Enable Parameter**   Feature/option

(1)   Option value

Scanning Sequence Examples

In most cases scanning one bar code sets the parameter value. For example, to enable signature capture, scan the **Enable Signature Capture** bar code under *Signature Capture on page 6-3*. The digital scanner issues a fast warble beep and the LED turns green, signifying a successful parameter entry.

Other parameters require scanning several bar codes. See the parameter descriptions for this procedure.

Errors While Scanning

Unless otherwise specified, to correct an error during a scanning sequence, just re-scan the correct parameter.

Signature Capture Preferences Parameter Defaults

Table 6-1 lists defaults for image capture preference parameters. Change these values in one of two ways:

- Scan the appropriate bar codes in this chapter. The new value replaces the standard default value in memory. To recall default parameter values, see *Default Parameters on page 5-5*.

- Configure the scanner using the 123Scan^2 configuration program. See *Chapter 2, 123Scan and Software Tools*.

> ✓ **NOTE** See *Appendix A, Standard Default Parameters* for all user preference, host, symbology, and miscellaneous default parameters.
>
> See *Appendix K, Signature Capture Code* for signature capture code information.

Table 6-1   *Signature Capture Preferences Parameter Defaults*

Parameter	Parameter Number [1]	SSI Number [2]	Default	Page Number
Signature Capture Preferences				
Signature Capture	93	5Dh	Disable	*6-3*
Signature Capture Image File Format Selection	313	F0h 39h	JPEG	*6-4*
Signature Capture Bits per Pixel (BPP)	314	F0h 3Ah	8 BPP	*6-5*
Signature Capture Width	366	F4h F0h 6Eh	400	*6-6*
Signature Capture Height	367	F4h F0h 6Fh	100	*6-6*
Signature Capture JPEG Quality	421	F0h A5h	65	*6-6*
1. Parameter number decimal values are used for programming via RSM commands. **2. SSI number hex values are used for programming via SSI commands.**				

Signature Capture Preferences

The parameters in this chapter control signature capture characteristics.

Signature Capture

Parameter # 93

SSI # 5Dh

A signature capture bar code is a special-purpose symbology which delineates a signature capture area in a document with a machine-readable format. The recognition pattern is variable so it can optionally provide an index to various signatures. The region inside the bar code pattern is considered the signature capture area. See *Appendix K, Signature Capture Code* for more information.

Scan one of the following bar codes to enable or disable Signature Capture.

**Enable Signature Capture
(1)**

***Disable Signature Capture
(0)**

Signature Capture File Format Selector

Parameter # 313

SSI # F0h 39h

Scan one of the following bar codes to select a signature file format appropriate for the system (BMP, TIFF, or JPEG). The imager stores captured signatures in the selected format.

Output File Format

Decoding a signature capture bar code de-skews the signature image and converts the image to a BMP, JPEG, or TIFF file format. The output data includes the file descriptor followed by the formatted signature image.

Table 6-2 *Output File Format*

File Descriptor			Signature Image
Output Format (1 byte)	Signature Type (1 byte)	Signature Image Size (4 bytes) (BIG Endian)	
JPEG - 1 BMP - 3 TIFF - 4	1 - 8	0x00000400	0x00010203….

BMP Signature Format
(3)

***JPEG Signature Format**
(1)

TIFF Signature Format
(4)

Signature Capture Bits Per Pixel

Parameter # 314

SSI # F0h 3Ah

Scan one of the following bar codes to select the number of significant bits per pixel (BPP) to use when capturing a signature:

- **1 BPP** - For a black and white image.

- **4 BPP** - Assigns 1 of 16 levels of grey to each pixel.

- **8 BPP** - Assigns 1 of 256 levels of grey to each pixel.

> **✓ NOTE** The imager ignores these settings for JPEG file formats, which only support **8 BPP**.

**1 BPP
(0)**

**4 BPP
(1)**

***8 BPP
(2)**

Signature Capture Width

Parameter # 366

SSI # F4h F0h 6Eh

The aspect ratio of the Signature Capture Width and Signature Capture Height parameters must match that of the signature capture area. For example, a 4 x 1 inch signature capture area requires a 4 to 1 aspect ratio of width to height.

To set the width of the signature capture box, scan the **Signature Capture Width** bar code, and then scan four bar codes from *Appendix G, Numeric Bar Codes* corresponding to a value in the range of 001 to 640 decimal.

Signature Capture Width (Default: 400)
(001 - 640 Decimal)

Signature Capture Height

Parameter # 367

SSI # F4h F0h 6Fh

To set the height of the signature capture box, scan the **Signature Capture Height** bar code, and then scan three bar codes from *Appendix G, Numeric Bar Codes* corresponding to a value in the range of 001 to 480 decimal.

Signature Capture Height (Default: 100)
(001 - 480 Decimal)

Signature Capture JPEG Quality

Parameter # 421

SSI # F0h A5h

Scan the **JPEG Quality Value** bar code, and then scan three bar codes from *Appendix G, Numeric Bar Codes* corresponding to a value from 005 to 100, where 100 represents the highest quality image.

JPEG Quality Value (Default: 065)
(5 - 100 Decimal)

CHAPTER 7 USB INTERFACE

Introduction

This chapter describes how to set up the scanner with a USB host. The scanner connects directly to a USB host, or a powered USB hub, which powers it. No additional power supply is required.
The scanner ships with the settings shown in *Table 7-1 on page 7-3* (also see *Appendix A, Standard Default Parameters* for all defaults). If the default values suit requirements, programming is not necessary.

Setting Parameters

To set feature values, scan a single bar code or a short bar code sequence. The settings are stored in non-volatile memory and are preserved even when the scanner powers down.

✓ **NOTE** Most computer monitors allow scanning bar codes directly on the screen. When scanning from the screen, be sure to set the document magnification to a level where you can see the bar code clearly, and bars and/or spaces do not merge.

To return all features to default values, scan *Set Factory Defaults on page 5-5*. Throughout the programming bar code menus, asterisks (*) indicate default values.

*Enable Parameter

* Indicates default   Feature/option

Scanning Sequence Examples

In most cases scanning one bar code sets the parameter value. For example, to set the USB keystroke delay to medium, scan the **Medium Delay (20 msec)** bar code under *USB Keystroke Delay on page 7-7*. The scanner issues a fast warble beep and the LED turns green, signifying a successful parameter entry.

Other parameters require scanning several bar codes. See the parameter descriptions for this procedure.

Errors While Scanning

Unless otherwise specified, to correct an error during a scanning sequence, just re-scan the correct parameter.
Connecting a USB Interface

Figure 7-1   *USB Connection.*

✓ **NOTE** If you already have existing non shielded cables from legacy products (such as the LS2208) they can be
reused. However, be aware that the shielded cables provide improved ESD performance. For regional
information about cables and cable compatibility, go to the Zebra Partner Portal at:
partnerportal.zebra.com/PartnerPortal/product_services/downloads_z/barcode_scanners/Universal-Cabl
e-Guide-Bar-Code-Scanners.xlsx.

The scanner connects to USB-capable hosts including:

- TGCS (IBM) terminals
- Apple™ desktop and notebooks
- Other network computers that support more than one keyboard.

The following operating systems support the scanner through USB:

- Windows® XP, 7, 8, 10
- MacOS 8.5 - MacOS 10.6
- IBM 4690 OS.

The scanner also interfaces with other USB hosts that support USB Human Interface Devices (HID).

To set up the digital scanner:

> ✓ **NOTE** Interface cables vary depending on configuration. The connectors illustrated in *Figure 7-1* are examples only. The connectors may be different than those illustrated, but the steps to connect the digital scanner are the same.

1. Connect the modular connector of the USB interface cable to the cable interface port on the digital scanner (see *Installing the Interface Cable on page 1-3*).

2. Plug the series A connector in the USB host or hub, or plug the Plus Power connector in an available port of the IBM SurePOS terminal.

3. The digital scanner automatically detects the host interface type and uses the default setting. If the default (*) does not meet your requirements, select another USB device type by scanning the appropriate bar code from *USB Device Type on page 7-5*.

4. On first installation when using Windows, the software prompts to select or install the Human Interface Device driver. To install this driver, provided by Windows, click **Next** through all the choices and click **Finished** on the last choice. The digital scanner powers up during this installation.

5. To modify any other parameter options, scan the appropriate bar codes in this chapter.

If problems occur with the system, see *Troubleshooting on page 4-3*.

USB Parameter Defaults

Table 7-1 lists the defaults for USB host parameters. Change these values in one of two ways:

*   Scan the appropriate bar codes in this chapter. The new value replaces the standard default value in memory. To recall default parameter values, see *Default Parameters on page 5-5*.

*   Configure the scanner using the 123Scan[2] configuration program. See *Chapter 2, 123Scan and Software Tools*.

> ✓ **NOTE** See *Appendix A, Standard Default Parameters* for all user preferences, symbologies, and miscellaneous default parameters.

Table 7-1   *USB Interface Parameter Defaults*

USB Host Parameters

USB Device Type

Scan one of the following bar codes to select the USB device type. To select a country keyboard type for the **USB Keyboard HID** host, see *Appendix B, Country Codes*.

✓ **NOTES**

1. When changing USB Device Types, the scanner resets and issues the standard startup beep sequences.

2. When connecting two scanners to a host, IBM does not allow selecting two of the same device type. If you require two connections, select IBM Table-Top USB for one scanner and IBM Hand-Held USB for the second scanner.

3. Select **IBM Hand-Held USB** to disable data transmission when an IBM register issues a Scan Disable command. Aim, illumination, and decoding is still permitted. Select **OPOS (IBM Hand-Held with Full Disable)** to completely shut off the scanner when an IBM register issues a Scan Disable command, including aim, illumination, decoding, and data transmission.
USB Keyboard HID

IBM Table-Top USB
IBM Hand-Held USB

**OPOS
(IBM Hand-Held with Full Disable)**

USB Device Type (continued)

NOTES

1. Before scanning *USB CDC Host*, install the appropriate USB CDC Driver on the host to ensure the scanner does not stall during power up (due to a failure to enumerate USB). Go to www.zebra.com/support, Support & Downloads > Barcode Scanners > USB CDC Driver, select the appropriate Windows platform, and download either Zebra_CDC_ACM_Driver_(x64)v2.15.0004.exe (64 bit) or Zebra_CDC_ACM_Driver(x86)_v2.15.0004.exe (32 bit).

   To recover a stalled scanner:

   Install the USB CDC Driver

   or

   Unplug the USB cable and then reconnect it to add power back to the scanner. Scan HID Keyboard or another host.

   After power-up, hold the trigger for 10 seconds, which allows the digital scanner to power up using an alternate USB configuration. Upon power-up, scan another **USB Device Type**.

2. To select the Toshiba TEC device type, refer to the *Toshiba TEC Programmer's Guide*.

3. Select **USB HID POS** to communicate over a USB cable with Universal Windows Platform (UWP) applications running on Windows 10 devices.
USB CDC Host

SSI over USB CDC

Symbol Native API (SNAPI) with Imaging Interface

Symbol Native API (SNAPI) without Imaging Interface

**USB HID POS
(for Windows 10 devices only)**

Symbol Native API (SNAPI) Status Handshaking

After selecting a SNAPI interface as the USB device type, scan one of the following bar codes to select whether to enable or disable status handshaking.

*Enable SNAPI Status Handshaking

Disable SNAPI Status Handshaking

USB Keystroke Delay

Scan one of the following bar codes to set the delay, in milliseconds, between emulated keystrokes. Select a longer delay for hosts that require slower data transmission.

*No Delay

Medium Delay (20 msec)
Long Delay (40 msec)

USB CAPS Lock Override

This option applies only to the USB Keyboard HID device. Scan **Override Caps Lock Key** to preserve the case of the data regardless of the state of the **Caps Lock** key. This setting is always enabled for the Japanese Windows (ASCII) keyboard type and can not be disabled.
**Override Caps Lock Key
(Enable)**

***Do Not Override Caps Lock Key
(Disable)**

Bar Codes with Unknown Characters

This option applies only to the USB Keyboard HID and IBM devices. Unknown characters are characters the host does not recognize. Scan **Send Bar Codes With Unknown Characters** to send all bar code data except for unknown characters. The scanner issues no error beeps.

Scan **Do Not Send Bar Codes With Unknown Characters** for IBM devices to prevent sending bar codes containing at least one unknown character to the host, or for USB Keyboard HID devices to send the bar code characters up to the unknown character. The scanner issues an error beep.
*Send Bar Codes with Unknown Characters
Do Not Send Bar Codes with Unknown Characters

USB Convert Unknown to Code 39

This option applies only to the IBM Hand-Held, IBM Table-Top, and OPOS devices. Scan one of the following bar codes to enable or disable converting unknown bar code type data to Code 39.
Enable Convert Unknown to Code 39

*Disable Convert Unknown to Code 39

USB Fast HID

Scan **Enable USB Fast HID** to transmit USB HID data at a faster rate.

✓ *NOTE* Disable this if there are problems with transmission.
*Enable USB Fast HID

Disable USB Fast HID

USB Polling Interval

Scan one of the following bar codes to set the polling interval, which is the rate at which data transmits between the scanner and host computer. A lower number indicates a faster data rate.

✓ *NOTE* When changing the USB polling interval, the scanner restarts and issues a power-up beep sequence.

⚠ *IMPORTANT* Ensure the host supports the selected data rate.
1 msec
2 msec
*3 msec

4 msec

5 msec

USB Polling Interval (continued)

6 msec

7 msec

8 msec

9 msec

Keypad Emulation

Scan **Enable Keypad Emulation** to send all characters as ASCII sequences over the numeric keypad. For example, ASCII A transmits as "ALT make" 0 6 5 "ALT Break".

✓ **NOTE** If your keyboard type is not listed in the country code list (see *Country Codes on page B-1*), disable *Quick Keypad Emulation on page 7-12* and enable **Keypad Emulation**.

*Enable Keypad Emulation

Disable Keypad Emulation

Quick Keypad Emulation

This option applies only to the USB Keyboard HID device when *Keypad Emulation* is enabled. Scan **Enable Quick Keypad Emulation** for a quicker method of emulation using the numeric keypad where ASCII sequences are only sent for ASCII characters not found on the keyboard.

*Enable Quick Keypad Emulation

Disable Quick Keypad Emulation

Keypad Emulation with Leading Zero

Scan **Enable Keypad Emulation with Leading Zero** to send character sequences sent over the numeric keypad as ISO characters which have a leading zero. For example, ASCII A transmits as "ALT MAKE" 0 0 6 5 "ALT BREAK".

*Enable Keypad Emulation with Leading Zero

Disable Keypad Emulation with Leading Zero

USB Keyboard FN1 Substitution

This option applies only to the USB Keyboard HID device. Scan **Enable USB Keyboard FN1 Substitution** to replace any FN1 character in a GS1 128 bar code with a user-selected Key Category and value. See *FN1 Substitution Values on page 5-34* to set the Key Category and Key Value.

**Enable USB Keyboard FN1 Substitution**
*Disable USB Keyboard FN1 Substitution

Function Key Mapping

ASCII values under 32 are normally sent as a control-key sequence (see *Table I-1 on page I-1*). Scan **Enable Function Key Mapping** to send the keys in bold in place of the standard key mapping. Table entries that do not have a bold equivalent remain the same regardless of whether you enable this parameter.

Enable Function Key Mapping
*Disable Function Key Mapping

Simulated Caps Lock

Scan **Enable Simulated Caps Lock** to invert upper and lower case characters on the bar code as if the Caps Lock state is enabled on the keyboard. This inversion occurs regardless of the keyboard's **Caps Lock** state.

> *NOTE* Simulated Caps Lock applies to ASCII characters only.

> *NOTE* Do not enable this if *USB CAPS Lock Override on page 7-8* is enabled.
**Enable Simulated Caps Lock**

*Disable Simulated Caps Lock

Convert Case

Scan one of the following bar codes to convert all bar code data to the selected case.

✓ *NOTE* Convert Case applies to ASCII characters only.

*No Case Conversion

Convert All to Upper Case

Convert All to Lower Case

USB Static CDC

When disabled, each device connected consumes another COM port (first device = COM1, second device = COM2, third device = COM3, etc.)

When enabled, each device connects to the same COM port.

*Enable USB Static CDC

Disable USB Static CDC

CDC Beep on <BEL>

If you enable this parameter, the scanner issues a beep when it detects a <BEL> character in USB CDC communications. <BEL> indicates an illegal entry or other important event.

*Enable CDC Beep on <BEL>

Disable CDC Beep on <BEL>

USB CDC Host Variant

Parameter # 1713

The USB Airline/Airport (CUTE/CUSS/CUPS) CDC host variant feature mimics the RS-232 host variant (CUTE) feature and is supported over USB CDC host mode. The scanner transmits data in Airline/Airport (CUTE/CUSS/CUPS) data format <Prefix><Data><Suffix>.

The USB Airline/Airport (CUTE/CUSS/CUPS) feature supports two CDC host variants; one for each Independent Software Vendor (ISV) specification (namely, SITA and ARINC). The default USB CDC host variant is Standard CDC Host Mode.

*CDC Standard

CDC SITA

CDC ARINC

Lockout of Parameter Bar Code Scanning

If the scanner is configured as USB CDC Host Variant (other than CDC Standard), it disables all parameter bar code scanning. The user can unlock it by scanning **Enable Parameter Bar Code Scanning** on *page 5-6*.

Parameter Default

Enabling of any of the USB CDC Host Variants (other than CDC Standard) requires coercion of other parameters. The scanner updates the parameters in *Table 7-2* to the specified default values based on the USB CDC Host Variant selected.

Table 7-2 *Parameter Default for Airport Device Types*

Parameter	SITA Defaults	ARINC Defaults
IATA 2 of 5 (D 2 of 5)	Enabled	Enabled
Parameter Scanning	Disabled	Disabled
IATA 2 of 5 (D 2 of 5) lengths	6 to 55	6 to 55

All others	None

* **Note**: Bar code types with check digits are currently not supported on the scanner for ARINC.

TGCS (IBM) USB Direct I/O Beep

The host can send a direct I/O beep request to the scanner. If you select **Ignore Direct I/O Beep**, the scanner does not sound beeps on this command. All directives are still acknowledged to the USB host as if they were processed.

*Honor Direct IO Beep

Ignore Direct IO Beep

TGCS (IBM) USB Beep Directive

The host can send a beeper configuration request to the scanner. Scan **Ignore Beep Directive** to prevent the scanner from processing the host request. All directives are still acknowledged to the USB host as if they were processed.

Honor Beep Directive

*Ignore Beep Directive

TGCS (IBM) USB Bar Code Configuration Directive

The host can enable and disable code types. Scan **Ignore Bar Code Configuration Directive** to prevent the scanner from processing the host request. All directives are still acknowledged to the USB host as if they were processed.

Honor Bar Code Configuration Directive

*Ignore Bar Code Configuration Directive

TGCS (IBM) USB Specification Version

Select **IBM Specification Level Version 0 (Original)** to send the following code types as Unknown:

- Data Matrix
- GS1 Data Matrix
- QR Code
- GS1 QR
- MicroQR Code
- Aztec

Select **IBM Specification Level Version 2.2** to send the code types with the appropriate IBM identifiers.

IBM Specification Level Version 0 (Original)

*IBM Specification Level Version 2.2

ASCII Character Sets for USB

See *Appendix I, ASCII Character Sets* for the following:

- ASCII Character Set (*Table I-1 on page I-1*)
- ALT Key Character Set (*Table I-2 on page I-6*)
- GUI Key Character Set (*Table I-3 on page I-7*)
- F Key Character Set (*Table I-5 on page I-10*).

CHAPTER 8 SSI INTERFACE

Introduction

This chapter describes the system requirements of the Simple Serial Interface (SSI), which provides a communications link between Zebra decoders (e.g., scan engines, slot scanners, hand-held scanners, two-dimensional scanners, hands-free scanners, and RF base stations) and a serial host. It provides the means for the host to control the decoder or scanner.

Communication

All communication between the scanner and host occurs over the hardware interface lines using the SSI protocol. Refer to the *Simple Serial Interface Programmer's Guide*, p/n 72E-40451-xx, for more information on SSI.

The host and the scanner exchange messages in packets. A packet is a collection of bytes framed by the proper SSI protocol formatting bytes. The maximum number of bytes per packet that the SSI protocol allows for any transaction is 257 (255 bytes + 2 byte checksum).

Depending on the configuration, the scanner can send decode data as ASCII data (unpacketed), or as part of a larger message (packeted).

SSI performs the following functions for the host device:

- Maintains a bi-directional interface with the scanner
- Allows the host to send commands that control the scanner
- Passes data from the scanner to a host device in SSI packet format or straight decode message.

The SSI environment consists of a scanner, a serial cable which attaches to the host device, and if required, a power supply.

SSI transmits all decode data including special formatting (e.g., AIM ID). Parameter settings can control the format of the transmitted data.

The scanner can also send parameter information, product identification information, or event codes to the host.

All commands sent between the scanner and host must use the format described in the SSI Message Formats section. describes the required sequence of messages in specific cases.

Table 8-1 lists all the SSI opcodes the scanner supports. The host transmits opcodes designated type H. The scanner (decoder) transmits type D opcodes, and either can transmit Host/Decoder (H/D) types.

Table 8-1   *SSI Commands*

Name	Type	Opcode	Description
AIM_OFF	H	0xC4	Deactivate aim pattern.
AIM_ON	H	0xC5	Activate aim pattern.
BEEP	H	0xE6	Sound the beeper.
CAPABILITIES_REPLY	D	0xD4	Reply to CAPABILITIES_REQUEST; contains a list of the capabilities and commands the decoder supports.
CAPABILITIES_REQUEST	H	0xD3	Request capabilities report from the decoder.
CMD_ACK	H/D	0xD0	Positive acknowledgment of received packet.
CMD_NAK	H/D	0xD1	Negative acknowledgment of received packet.
DECODE_DATA	D	0xF3	Decode data in SSI packet format.
EVENT	D	0xF6	Event indicated by associated event code.
LED_OFF	H	0xE8	De-activate LED output.
LED_ON	H	0xE7	Activate LED output.
PARAM_DEFAULTS	H	0xC8	Set parameter default values.
PARAM_REQUEST	H	0xC7	Request values of certain parameters.
PARAM_SEND	H/D	0xC6	Send parameter values.
REPLY_REVISION	D	0xA4	Reply to REQUEST_REVISION, contains the decoder's software/hardware configuration.
REQUEST_REVISION	H	0xA3	Request the decoder's configuration.
SCAN_DISABLE	H	0xEA	Prevent the operator from scanning bar codes.
SCAN_ENABLE	H	0xE9	Permit bar code scanning.
SLEEP	H	0xEB	Request to place the decoder into low power.
START_DECODE	H	0xE4	Tell the decoder to attempt to decode a bar code.
STOP_DECODE	H	0xE5	Tell the decoder to abort a decode attempt.
WAKEUP	H	N/A	Wake the decoder from low power mode.

For details of the SSI protocol, refer to the *Simple Serial Interface Programmer's Guide*.

SSI Transactions

General Data Transactions

ACK/NAK Handshaking

If you enable ACK/NAK handshaking (the default), all packeted messages must have a CMD_ACK or CMD_NAK response, unless the command description states otherwise. Zebra recommends leaving this handshaking enabled to provide feedback to the host. Raw decode data and WAKEUP do not use ACK/NAK handshaking since they are not packeted data.

Following is an example of a problem which can occur if you disable ACK/NAK handshaking:

- The host sends a PARAM_SEND message to the scanner to change the baud rate from 9600 to 19200.
- The scanner cannot interpret the message.
- The scanner does not implement the change the host requested.
- The host assumes that the parameter change occurred and acts accordingly.
- Communication is lost because the change did not occur on both sides.

If you enable ACK/NAK handshaking, the following occurs:

- The host sends a PARAM_SEND message.
- The scanner cannot interpret the message.
- The scanner CMD_NAKs the message.
- The host resends the message.
- The scanner receives the message successfully, responds with CMD_ACK, and implements parameter changes.

Decoded Data Transmission

The *Decode Data Packet Format* parameter controls how decode data is sent to the host. Set this parameter to send the data in a DECODE_DATA packet. Clear this parameter to transmit the data as raw ASCII data.

> ✓ **NOTE** When transmitting decode data as raw ASCII data, ACK/NAK handshaking does not apply regardless of the state of the ACK/NAK handshaking parameter.

ACK/NAK Enabled and Packeted Data

The scanner sends a DECODE_DATA message after a successful decode. The scanner waits for a programmable timeout for a CMD_ACK response. If it does not receive the response, the scanner tries to send two more times before issuing a host transmission error. If the scanner receives a CMD_NAK from the host, it may attempt a retry depending on the cause field of the CMD_NAK message.
ACK/NAK Enabled and Unpacketed ASCII Data

Even if ACK/NAK handshaking is enabled, no handshaking occurs because handshaking applies only to packeted data. In this example the packeted_decode parameter is disabled.
ACK/NAK Disabled and Packeted DECODE_DATA

In this example ACK/NAK does not occur even though packeted_decode is enabled because the ACK/NAK handshaking parameter is disabled.

Decoder

Communication Summary

RTS/CTS Lines

All communication must use RTS/CTS handshaking as described in the *Simple Serial Interface Programmer's Guide*, p/n 72E-40451-xx. If bypassing hardware handshaking, the host must send the WAKEUP command before all other communication or the first byte of a message can be lost during the scanner wakeup sequence. Zebra recommends not bypassing RTS/CTS hardware handshaking.

ACK/NAK Option

ACK/NAK handshaking is enabled by default and Zebra recommends leaving it enabled. Disabling this can cause communication problems, as handshaking is the only acknowledgment that a message was received correctly. ACK/NAK is not used with unpacketed decode data regardless of whether it is enabled.

Number of Data Bits

All communication with the scanner must use 8-bit data.

Serial Response Timeout

The *Host Serial Response Timeout* parameter determines how long to wait for a handshaking response before trying again or aborting further attempts. Set the same value for both the host and scanner.

> ✓ **NOTE** You can temporarily change the *Host Serial Response Timeout* when the host takes longer to process an ACK or longer data string. Zebra does not recommend frequent permanent changes due to limited write cycles of non-volatile memory.

Retries

The host resends data twice after the initial send if the scanner does not respond with an ACK or NAK (if ACK/NAK handshaking is enabled), or response data (e.g., PARAM_SEND, REPLY_REVISION). If the scanner replies with a NAK RESEND, the host resends the data. All resent messages must have the resend bit set in the Status byte.

The scanner resends data two times after the initial send if the host fails to reply with an ACK or NAK (if ACK/NAK handshaking is enabled).

Baud Rate, Stop Bits, Parity, Response Timeout, ACK/NAK Handshaking

If you use PARAM_SEND to change these serial parameters, the ACK response to the PARAM_SEND uses the previous values for these parameters. The new values then take effect for the next transaction.

Errors

The scanner issues a communication error when:

* The CTS line is asserted when the scanner tries to transmit, and is still asserted on each of two successive retries
* The scanner does not receive an ACK or NAK after initial transmit and two resends.

SSI Communication Notes

- When not using hardware handshaking, space messages sufficiently apart. The host must not communicate with the scanner if the scanner is transmitting.

- When using hardware handshaking, frame each message properly with handshaking signals. Do not try to send two commands within the same handshaking frame.

- There is a permanent/temporary bit in the PARAM_SEND message. Removing power from the scanner discards temporary changes. Permanent changes are written to non-volatile memory. Frequent changes shorten the life of the non-volatile memory.

Using Time Delay to Low Power Mode with SSI

Time Delay to Low Power Mode on page 5-13 provides options to select a general time delay. To program a more specific delay value, use an SSI command according to *Table 8-2*.

Table 8-2   *Values for Selecting Time Delay to Low Power*

Value	Timeout	Value	Timeout	Value	Timeout	Value	Timeout
0x00	15 Min	0x10	1 Sec	0x20	1 Min	0x30	1 Hour
0x01	30 Min	0x11	1 Sec	0x21	1 Min	0x31	1 Hour
0x02	60 Min	0x12	2 Sec	0x22	2 Min	0x32	2 Hours
0x03	90 Min	0x13	3 Sec	0x23	3 Min	0x33	3 Hours
N/A	N/A	0x14	4 Sec	0x24	4 Min	0x34	4 Hours
N/A	N/A	0x15	5 Sec	0x25	5 Min	0x35	5 Hours
N/A	N/A	0x16	6 Sec	0x26	6 Min	0x36	6 Hours
N/A	N/A	0x17	7 Sec	0x27	7 Min	0x37	7 Hours
N/A	N/A	0x18	8 Sec	0x28	8 Min	0x38	8 Hours
N/A	N/A	0x19	9 Sec	0x29	9 Min	0x39	9 Hours
N/A	N/A	0x1A	10 Sec	0x2A	10 Min	0x3A	10 Hours
N/A	N/A	0x1B	15 Sec	0x2B	15 Min	0x3B	15 Hours
N/A	N/A	0x1C	20 Sec	0x2C	20 Min	0x3C	20 Hours
N/A	N/A	0x1D	30 Sec	0x2D	30 Min	0x3D	30 Hours
N/A	N/A	0x1E	45 Sec	0x2E	45 Min	0x3E	45 Hours
N/A	N/A	0x1F	60 Sec	0x2F	60 Min	0x3F	60 Hours

> ⚠️ **CAUTION** With hardware handshaking disabled, the scanner wakes from low power mode upon receiving a character. However, the scanner does not process this character or any others it receives during the 7 ms period following wakeup. Wait at least 7 ms after wakeup to send valid characters.

Encapsulation of RSM Commands/Responses over SSI

The SSI protocol allows the host to send a command that is variable in length up to 255 bytes. Although there is a provision in the protocol to multi-packet commands from the host, the scanner does not support this. The host must fragment packets using the provisions in the RSM protocol.

Command Structure

Byte	7	6	5	4	3	2	1	0
0	Length (not including the checksum)							
1	SSI_MGMT_COMMAND (0x80)							
2	Message Source (4 - Host)							
3	Reserved (0)				Reserved (0)	Reserved (0)	Cont'd packet	Retransmit
4	Payload data (see the following example)							
...								
Length -1								
Length	2's complement checksum (MSB)							
Length +1	2's complement checksum (LSB)							

The expected positive response is SSI_MGMT_COMMAND which can be a multi-packet response. Devices that do not support this command respond with the standard SSI_NAK.

Response Structure

Byte	7	6	5	4	3	2	1	0
0	Length (not including the checksum)							
1	SSI_MGMT_COMMAND (0x80)							
2	Message Source (0 - Decoder)							
3	Reserved (0)				Reserved (0)	Reserved (0)	Cont'd packet	Retransmit
4	Payload data (see the following example)							
...								
Length -1								
Length	2's complement checksum (MSB)							
Length +1	2's complement checksum (LSB)							

Example Transaction

The following example illustrates how to retrieve diagnostic information (Diagnostic Testing and Reporting (Attribute #10061) decimal) from the scanner using encapsulation of RSM commands over SSI. Before sending an RSM command, the host must send the RSM Get Packet Size command to query the packet size supported by the device.

Command from Host to Query Packet Size Supported by Device

0A 80 04 00 00 06 20 00 FF FF FD 4E

Where:

- 0A 80 04 00 is encapsulation of RSM commands over SSI command header

- 00 06 20 00 FF FF is RSM Get Packet Size command

- FD 4E is SSI command checksum

Response from Device with Packet Size Information

0C 80 00 00 00 08 20 00 00 F0 00 F0 FD 6C

Where:

- 0C 80 00 00 is encapsulation of RSM command over SSI command header

- 00 08 20 00 00 F0 00 F0 is RSM Get Packet Size response

- FD 6C is SSI response checksum

Command from Host to Retrieve Diagnostic Information

0C 80 04 00 00 08 02 00 27 4D 42 00 FE B0

Where:

- 0C 80 04 00 is encapsulation of RSM commands over SSI command header

- 00 08 02 00 27 4D 42 00 is attribute Get command requesting attribute 10061 decimal

- FE B0 is SSI command checksum

Response from Device with Diagnostic Information

21 80 00 00 00 1D 02 00 27 4D 41 01 42 00 0E 00 00 00 00 01 03 02 03 03 03 04 03 05 03 06 03 FF FF FC 15

Where:

- 21 80 00 00 00 1D 02 00 27 4D 41 01 42 00 0E 00 00 is encapsulation of RSM responses over SSI command header

- 00 00 01 03 02 03 03 03 04 03 05 03 06 03 is attribute Get response which includes diagnostic report value

- FF FF is attribute Get response, packet termination

- FC 15 is SSI response checksum

Setting Parameters

This section describes how to set up the scanner with an SSI host. When using SSI, program the scanner via bar code menu or SSI hosts commands.

The scanner ships with the settings shown in *Table 8-3 on page 8-11* (also see *Appendix A, Standard Default Parameters* for all defaults). If the default values suit requirements, programming is not necessary.

To set feature values, scan a single bar code or a short bar code sequence. The settings are stored in non-volatile memory and are preserved even when the scanner powers down.

> ✓ *NOTE* Most computer monitors allow scanning bar codes directly on the screen. When scanning from the screen, be sure to set the document magnification to a level where you can see the bar code clearly, and bars and/or spaces do not merge.

To return all features to default values, scan *Set Factory Defaults on page 5-5*. Throughout the programming bar code menus, asterisks (*) indicate default values.

* Indicates default — ***Enable Parameter** — Feature/option
(1) — Option value

Scanning Sequence Examples

In most cases scanning one bar code sets the parameter value. For example, to set the baud rate to 19,200, scan the **Baud Rate 19,200** bar code under *Baud Rate on page 8-12*. The scanner issues a fast warble beep and the LED turns green, signifying a successful parameter entry.

Other parameters require scanning several bar codes. See the parameter descriptions for this procedure.

Errors While Scanning

Unless otherwise specified, to correct an error during a scanning sequence, just re-scan the correct parameter.

Simple Serial Interface Parameter Defaults

Table 8-1 lists defaults for SSI host parameters. Change these values in one of two ways:

- Scan the appropriate bar codes in this chapter. The new value replaces the standard default value in memory. To recall default parameter values, see *Default Parameters on page 5-5*.

- Download data through the device's serial port using SSI. Hexadecimal parameter numbers appear in this chapter below the parameter title, and option values appear in parenthesis beneath the accompanying bar codes. Refer to the *Simple Serial Interface (SSI) Programmer's Guide* for detailed instructions for changing parameters using this method.

✓ **NOTE** See *Appendix A, Standard Default Parameters* for all user preference, host, symbology, and miscellaneous default parameters.

Table 8-3 *SSI Interface Default Table*

Parameter	Parameter Number	SSI Number	Default	Page Number
SSI Host Parameters				
Select SSI Host	N/A	N/A	N/A	*8-12*
Baud Rate	156	9Ch	9600	*8-12*
Parity	158	9Eh	None	*8-14*
Check Parity	151	97h	Disable	*8-15*
Stop Bits	157	9Dh	1	*8-15*
Software Handshaking	159	9Fh	ACK/NAK	*8-16*
Host RTS Line State	154	9Ah	Low	*8-17*
Decode Data Packet Format	238	EEh	Send Raw Decode Data	*8-17*
Host Serial Response Timeout	155	9Bh	2 Seconds	*8-18*
Host Character Timeout	239	EFh	200 msec	*8-19*
Multipacket Option	334	F0h 4Eh	Option 1	*8-20*
Interpacket Delay	335	F0h 4Fh	0 msec	*8-21*
Event Reporting				
Decode Event	256	F0h 00h	Disable	*8-22*
Boot Up Event	258	F0h 02h	Disable	*8-23*
Parameter Event	259	F0h 03h	Disable	*8-23*

✓ **NOTE** SSI interprets Prefix, Suffix1, and Suffix2 values listed in *Table I-1 on page I-1* differently than other interfaces. SSI does not recognize key categories, only the 3-digit decimal value. The default value of 7013 is interpreted as CR only.

SSI Host Parameters

Select SSI Host

To select SSI as the host interface, scan the following bar code.

SSI Host

Baud Rate

Parameter # 156
SSI # 9Ch

Baud rate is the number of bits of data transmitted per second. Scan one of the following bar codes to set the scanner's baud rate to match the baud rate setting of the host device. Otherwise, data may not reach the host device or may reach it in distorted form.

*Baud Rate 9600
(6)

Baud Rate 19,200
(7)

Baud Rate 38,400
(8)

Baud Rate 57,600
(10)

Baud Rate (continued)

**Baud Rate 115,200
(11)**

**Baud Rate 230,400
(13)**

**Baud Rate 460,800
(14)**

**Baud Rate 921,600
(15)**

Parity

Parameter # 158
SSI # 9Eh

A parity check bit is the most significant bit of each ASCII coded character. Scan one of the following bar codes to select the parity type according to host device requirements:

- **Odd** - This sets the parity bit value to 0 or 1, based on data, to ensure that the coded character contains an odd number of 1 bits.

- **Even** - This sets the parity bit value to 0 or 1, based on data, to ensure that the coded character contains an even number of 1 bits.

- **None** - No parity bit is required.

Odd
(2)

Even
(1)

*None
(0)

Check Parity

Parameter # 151
SSI # 97h

Scan one of the following bar codes to select whether to check the parity of received characters. See *Parity* to select the type of parity.

*Do Not Check Parity
(0)

Check Parity
(1)

Stop Bits

Parameter # 157
SSI # 9Dh

The stop bit(s) at the end of each transmitted character marks the end of transmission of one character and prepares the receiving device for the next character in the serial data stream. Scan one of the following bar codes to set the number of stop bits (one or two) based on the number the receiving host can accommodate.

*1 Stop Bit
(1)

2 Stop Bits
(2)

Software Handshaking

Parameter # 159
SSI # 9Fh

This parameter offers control of data transmission in addition to the control hardware handshaking offers. Hardware handshaking is always enabled; you cannot disable it.

Options:

- **Disable ACK/NAK Handshaking** - The scanner neither generates nor expects ACK/NAK handshaking packets.

- **Enable ACK/NAK Handshaking** - After transmitting data, the scanner expects either an ACK or NAK response from the host. The scanner also ACKs or NAKs messages from the host.

    The scanner waits up to the programmable *Host Serial Response Timeout* to receive an ACK or NAK. If the scanner does not get a response in this time, it resends its data up to two times before discarding the data and declaring a transmission error.

Disable ACK/NAK
(0)

*Enable ACK/NAK
(1)

Host RTS Line State

Parameter # 154
SSI # 9Ah

Scan one of the following bar codes to set the expected idle state of the Serial Host RTS line.

The SSI interface is used with host applications which also implement the SSI protocol. However, you can use the scanner in a "scan-and-transmit" mode to communicate with any standard serial communication software on a host PC (see *Decode Data Packet Format on page 8-17*). If transmission errors occur in this mode, the host PC may be asserting hardware handshaking lines which interfere with the SSI protocol. Scan the **High** bar code to address this problem.

*Low
(0)

High
(1)

Decode Data Packet Format

Parameter # 238
SSI # EEh

Scan one of the following bar codes to select whether to transmit decoded data in raw format (unpacketed), or with the packet format defined by the serial protocol.

Selecting the raw format disables ACK/NAK handshaking for decode data.

*Send Raw Decode Data
(0)

Send Packeted Decode Data
(1)

Host Serial Response Timeout

Parameter # 155
SSI # 9Bh

Scan one of the following bar codes to specify how long the scanner waits for an ACK or NAK before resending. Also, if the scanner wants to send, and the host has already been granted permission to send, the scanner waits for the designated timeout before declaring an error.

✓ **NOTE** Other values are available via SSI command.

*Low - 2 Seconds
(20)

Medium - 5 Seconds
(50)

High - 7.5 Seconds
(75)

Maximum - 9.9 Seconds
(99)

Host Character Timeout

Parameter # 239
SSI # EFh

Scan one of the following bar codes to specify the maximum time the scanner waits between characters transmitted by the host before discarding the received data and declaring an error.

✓ **NOTE** Other values are available via SSI command.

*Low - 200 msec
(20)

Medium - 500 msec
(50)

High - 750 msec
(75)

Maximum - 990 msec
(99)

Multipacket Option

Parameter # 334
SSI # F0h 4Eh

Scan one of the following bar codes to control ACK/NAK handshaking for multi-packet transmissions:

- **Multi-Packet Option 1** - The host sends an ACK/NAK for each data packet during a multi-packet transmission.

- **Multi-Packet Option 2** - The scanner sends data packets continuously, with no ACK/NAK handshaking to pace the transmission. The host, if overrun, can use hardware handshaking to temporarily delay scanner transmissions. At the end of transmission, the scanner waits for a CMD_ACK or CMD_NAK.

- **Multi-Packet Option 3** - This is the same as option 2 with the addition of a programmable interpacket delay. See *Interpacket Delay on page 8-21* to set this delay.

*Multipacket Option 1
(0)

Multipacket Option 2
(1)

Multipacket Option 3
(2)

Interpacket Delay

Parameter # 335
SSI # F0h 4Fh

Scan one of the following bar codes to specify the interpacket delay if you selected **Multipacket Option 3**.

✓ *NOTE* Other values are available via SSI command.

*Minimum - 0 msec
(0)

Low - 25 msec
(25)

Medium - 50 msec
(50)

High - 75 msec
(75)

Maximum - 99 msec
(99)

Event Reporting

The host can request the scanner to provide certain information (events) relative to scanner behavior. Scan the following bar codes to enable or disable the events listed in *Table 8-4* and on the following pages.

Table 8-4 *Event Codes*

Event Class	Event	Code Reported
Decode Event	Non-parameter decode	0x01
Boot Up Event	System power-up	0x03
Parameter Event	Parameter entry error	0x07
	Parameter stored	0x08
	Defaults set (and parameter event is enabled by default)	0x0A
	Number expected	0x0F

Decode Event

Parameter # 256
SSI # F0h 00h

Scan one of the following bar codes to enable or disable Decode Event.

- **Enable Decode Event** - The scanner generates a message to the host upon a successful bar code decode.

- **Disable Decode Event** - No notification is sent.
Enable Decode Event
(1)

*Disable Decode Event
(0)

Boot Up Event

Parameter # 258
SSI # F0h 02h

Scan one of the following bar codes to enable or disable Boot Up Event:

- **Enable Boot Up Event** - The scanner generates a message to the host whenever power is applied.

- **Disable Boot Up Event** - No notification is sent.
Enable Boot Up Event
(1)

*Disable Boot Up Event
(0)

Parameter Event

Parameter # 259
SSI # F0h 03h

Scan one of the following bar codes to enable or disable Parameter Event:

- **Enable Parameter Event** - The scanner generates a message to the host when one of the events specified in *Table 8-4 on page 8-22* occurs.

- **Disable Parameter Event** - No notification is sent.
Enable Parameter Event
(1)

*Disable Parameter Event
(0)

CHAPTER 9 RS-232 INTERFACE

Introduction

This chapter describes how to set up the scanner with an RS-232 host. The scanner uses the RS-232 interface to connect to point-of-sale devices, host computers, or other devices with an available RS-232 port (e.g., com port).

The scanner ships with the settings shown in *Table 9-1 on page 9-3* (also see *Appendix A, Standard Default Parameters* for all defaults). If the default values suit requirements, programming is not necessary.

If your host does not appear in *Table 9-2*, refer to the documentation for the host device to set communication parameters to match the host.

✓ **NOTE** The scanner uses TTL RS-232 signal levels, which interface with most system architectures. For system architectures requiring RS-232C signal levels, Zebra offers different cables providing TTL-to-RS-232C conversion. Contact the Zebra Support & Downloads website for more information.

Setting Parameters

To set feature values, scan a single bar code or a short bar code sequence. The settings are stored in non-volatile memory and are preserved even when the scanner powers down.

✓ **NOTE** Most computer monitors allow scanning bar codes directly on the screen. When scanning from the screen, be sure to set the document magnification to a level where you can see the bar code clearly, and bars and/or spaces do not merge.

To return all features to default values, scan *Set Factory Defaults on page 5-5*. Throughout the programming bar code menus, asterisks (*) indicate default values.

* Indicates default — ***Enable Parameter** — Feature/option

Scanning Sequence Examples

In most cases scanning one bar code sets the parameter value. For example, to set the baud rate to 19,200, scan the **Baud Rate 19,200** bar code under *Baud Rate on page 9-8*. The scanner issues a fast warble beep and the LED turns green, signifying a successful parameter entry.

Other parameters require scanning several bar codes. See the parameter descriptions for this procedure.

Errors While Scanning

Unless otherwise specified, to correct an error during a scanning sequence, just re-scan the correct parameter.

Connecting an RS-232 Interface

Connect the scanner directly to the host computer.

Serial port connector to host

Interface cable

Power supply
Figure 9-1   *RS-232 Connection*

✓ **NOTE** Interface cables vary depending on configuration. The connectors can be different than those illustrated in *Figure 9-1*, but the steps to connect the scanner are the same.

1. Attach the modular connector of the RS-232 interface cable to the cable interface port on the scanner. See *Installing the Interface Cable on page 1-3*.

2. Connect the other end of the RS-232 interface cable to the serial port on the host.

3. If required, connect the power supply to the serial connector end of the RS-232 interface cable. Plug the power supply into an appropriate outlet.

4. The scanner automatically detects the host interface type and uses the default setting. If the default (*) does not meet your requirements, select another RS-232 host type by scanning the appropriate bar code from *RS-232 Host Types on page 9-6*.

5. To modify any other parameter options, scan the appropriate bar codes in this chapter.

If problems occur with the system, see *Troubleshooting on page 4-3*.

RS-232 Parameter Defaults

Table 9-1 lists defaults for RS-232 host parameters. Change these values in one of two ways:

- Scan the appropriate bar codes in this chapter. The new value replaces the standard default value in memory. To recall default parameter values, see *Default Parameters on page 5-5*.

- Configure the scanner using the 123Scan[2] configuration program. See *Chapter 2, 123Scan and Software Tools*.

✓ **NOTE** See *Appendix A, Standard Default Parameters* for all user preference, host, symbology, and miscellaneous default parameters.

Table 9-1   *RS-232 Interface Parameter Defaults*

Parameter	Default	Page Number
RS-232 Host Parameters		
RS-232 Host Types	Standard	*9-6*
Baud Rate	9600	*9-8*
Parity	None	*9-9*
Stop Bits	1 Stop Bit	*9-9*
Data Bits	8-bit	*9-10*
Check Receive Errors	Enable	*9-10*
Hardware Handshaking	None	*9-11*
Software Handshaking	None	*9-13*
Host Serial Response Timeout	2 Sec	*9-15*
RTS Line State	Low RTS	*9-16*
Beep on <BEL>	Disable	*9-16*
Intercharacter Delay	0 msec	*9-17*
Nixdorf Beep/LED Options	Normal Operation	*9-18*
Bar Codes with Unknown Characters	Send Bar Code With Unknown Characters	*9-18*

RS-232 Host Parameters

Various RS-232 hosts use their own parameter default settings. Selecting standard, ICL, Fujitsu, Wincor-Nixdorf Mode A, Wincor-Nixdorf Mode B, OPOS/JPOS, Olivetti, Omron, or Common Use Terminal Equipment (CUTE-LP/LG bar code readers) sets the defaults listed in *Table 9-2*.

Table 9-2   *Terminal Specific RS-232*

Parameter	ICL	Fujitsu	Wincor-Nixdorf Mode A	Wincor-Nixdorf Mode B/OPOS/JPOS	Olivetti	Omron	CUTE
Transmit Code ID	Yes	Yes	Yes	Yes	Yes	Yes	Yes
Data Transmission Format	Data/Suffix	Data/Suffix	Data/Suffix	Data/Suffix	Prefix/Data/Suffix	Data/Suffix	Prefix/Data/Suffix
Suffix	CR (1013)	CR (1013)	CR (1013)	CR (1013)	ETX (1002)	CR (1013)	CR (1013) ETX (1003)
Baud Rate	9600	9600	9600	9600	9600	9600	9600
Parity	Even	None	Odd	Odd	Even	None	Even
Hardware Handshaking	RTS/CTS Option 3	None	RTS/CTS Option 3	RTS/CTS Option 3	None	None	None
Software Handshaking	None	None	None	None	ACK/NAK	None	None
Serial Response Timeout	9.9 Sec.	2 Sec.	None	None	9.9 Sec.	9.9 Sec.	9.9 Sec.
Stop Bit Select	One	One	One	One	One	One	One
ASCII Format	8-Bit	8-Bit	8-Bit	8-Bit	7-Bit	8-Bit	7-Bit
Beep On <BEL>	Disable	Disable	Disable	Disable	Disable	Disable	Disable
RTS Line State	High	Low	Low	Low = No data to send	Low	High	High
Prefix	None	None	None	None	STX (1003)	None	STX (1002)

In the Wincor-Nixdorf Mode A/B, if CTS is low, scanning is disabled. When CTS is high, scanning is enabled. If you scan Wincor-Nixdorf RS-232 Mode A/B without connecting the scanner to the proper host, it may appear unable to scan. If this happens, scan a different RS-232 host type within 5 seconds of cycling power to the scanner.
The CUTE host disables all parameter scanning, including Set Defaults. If you inadvertently select CUTE, scan *Enable Parameter Bar Code Scanning (1) on page 5-6*, then change the host selection.

RS-232 Host Parameters (continued)

Selecting ICL, Fujitsu, Wincor-Nixdorf Mode A, Wincor-Nixdorf Mode B, OPOS/JPOS, Olivetti, Omron, or CUTE-LP/LG bar code readers transmits the code ID characters listed in *Table 9-3*. These code ID characters are not programmable and are separate from the Transmit Code ID feature. Do not enable the Transmit Code ID feature for these terminals.

Table 9-3   *Terminal Specific Code ID Characters*

Code Type	ICL	Fujitsu	Wincor-Nixdorf Mode A	Wincor-Nixdorf Mode B/ OPOS/JPOS	Olivetti	Omron	CUTE
UPC-A	A	A	A	A	A	A	A
UPC-E	E	E	C	C	C	E	None

RS-232 Host Types

To select an RS-232 host interface, scan one of the following bar codes.

✓ **NOTE** For a list of supported scanner functionality by communication protocol, see *Appendix J, Communication Protocol Functionality*.
*Standard RS-232[1]
ICL RS-232
Wincor-Nixdorf RS-232 Mode A

Wincor-Nixdorf RS-232 Mode B

[1]Scanning Standard RS-232 activates the RS-232 driver, but does not change port settings (e.g., parity, data bits, handshaking). Selecting another RS-232 host type bar code changes these settings.

RS-232 Host Types (continued)
||||||| |||||| ||||| |||||||||||
Olivetti ORS4500

||||||| |||||| ||||| |||||||||||
Omron
||||||| |||||| ||||| |||||||||||
OPOS/JPOS
||||||| |||||| ||||| |||||||||||
Fujitsu RS-232

||||||| |||||| ||||| |||||||||||
CUTE[2]

[2]The CUTE host disables all parameter scanning, including Set Defaults. If you inadvertently select CUTE, scan *Enable Parameter Bar Code Scanning (1) on page 5-6*, and then change the host selection.

Baud Rate

Baud rate is the number of bits of data transmitted per second. Scan one of the following bar codes to set the scanner's baud rate to match the baud rate setting of the host device. Otherwise, data may not reach the host device or may reach it in distorted form.

✓ *NOTE* The scanner does not support baud rates below 9600.

*Baud Rate 9600

Baud Rate 19,200

Baud Rate 38,400

Baud Rate 57,600

Baud Rate 115,200

Parity

A parity check bit is the most significant bit of each ASCII coded character. Scan one of the following bar codes to select the parity type according to host device requirements:

- **Odd** - This sets the parity bit value to 0 or 1, based on data, to ensure that the coded character contains an odd number of 1 bits.

- **Even** - This sets the parity bit value to 0 or 1, based on data, to ensure that the coded character contains an even number of 1 bits.

- **None** - No parity bit is required.
Odd
Even
*None

Stop Bits

The stop bit(s) at the end of each transmitted character marks the end of transmission of one character and prepares the receiving device for the next character in the serial data stream. Scan one of the following bar codes to set the number of stop bits (one or two) based on the number the receiving host can accommodate.
*1 Stop Bit

2 Stop Bits

Data Bits

This parameter allows the scanner to interface with devices requiring a 7-bit or 8-bit ASCII protocol.

7-bit
*8-bit

Check Receive Errors

Scan one of the following bar codes to set whether to check the parity, framing, and overrun of received characters. The parity value of received characters is verified against the value set for *Parity on page 9-9*.
*Check For Received Errors
Do Not Check For Received Errors

Hardware Handshaking

The data interface consists of an RS-232 port designed to operate either with or without the hardware handshaking lines Request to Send (RTS) and Clear to Send (CTS).

If hardware handshaking and software handshaking are both enabled, hardware handshaking takes precedence.

> **NOTE** The DTR signal is jumpered to the active state.

Options:

- **None** - This disables hardware handshaking and transmits scan data as it becomes available.

- **Standard RTS/CTS** - This sets standard RTS/CTS hardware handshaking and transmits scanned data according to the following sequence:

    a. The scanner reads the CTS line for activity:

        - If the CTS line is de-asserted, the scanner asserts the RTS line and waits up to *Host Serial Response Timeout on page 9-15* for the host to assert CTS, and then transmits data when asserted. If, after the timeout, the CTS line is not asserted, the scanner sounds a transmit error and discards the data.

        - If CTS is asserted, the scanner waits up to *Host Serial Response Timeout* for the host to de-assert CTS. If after this timeout the CTS line is still asserted, the scanner sounds a transmit error and discards the scanned data.

    b. The scanner de-asserts RTS after sending the last character of data.

    c. The host negates CTS. The scanner checks for a de-asserted CTS upon the next data transmission.

    During data transmission, if CTS is deasserted for more than 50 ms between characters, the scanner sounds a transmit error and discards the data. The data must be re-scanned.

- **RTS/CTS Option 1** - The scanner asserts RTS before transmitting and ignores the state of CTS. The scanner de-asserts RTS when transmission completes.

- **RTS/CTS Option 2** - RTS is always high or low (user-programmed logic level). However, the scanner waits for the host to assert CTS before transmitting data. If CTS is not asserted within the *Host Serial Response Timeout*, the scanner sounds a transmit error and discards the data. During data transmission, if CTS is deasserted for more than 50 ms between characters, the scanner sounds a transmit error and discards the data.

- **RTS/CTS Option 3** - This transmits scanned data according to the following sequence:

    a. The scanner asserts RTS before data transmission, regardless of the state of CTS.

    b. The scanner waits up to the *Host Serial Response Timeout* for the host to assert CTS, and then transmits data when asserted. If, after the timeout, the CTS line is not asserted, the scanner sounds a transmit error and discards the data.

    c. The scanner de-asserts RTS after sending the last character of data.

    d. The host negates CTS. The scanner checks for a de-asserted CTS upon the next data transmission.

    During data transmission, if CTS is deasserted for more than 50 ms between characters, the scanner sounds a transmit error and discards the data. The data must be re-scanned.

Hardware Handshaking (continued)

*None
Standard RTS/CTS

RTS/CTS Option 1
RTS/CTS Option 2
RTS/CTS Option 3

Software Handshaking

This parameter offers control of data transmission in addition to, or instead of, that offered by hardware handshaking. If software handshaking and hardware handshaking are both enabled, hardware handshaking takes precedence.

Options:

- **None** - This transmits data immediately. The scanner expects no response from the host.

- **ACK/NAK** - After transmitting data, the scanner waits for an ACK or NAK response from the host. If it receives a NAK, the scanner transmits the data again and waits for an ACK or NAK. After three unsuccessful attempts to send data after receiving NAKs, the scanner sounds a transmit error and discards the data.

  The scanner waits up to the programmable *Host Serial Response Timeout* to receive an ACK or NAK. If the scanner does not get a response in this time, it sounds a transmit error and discards the data. There are no reattempts.

- **ENQ** - The scanner waits for an ENQ character from the host before transmitting data. If it does not receive an ENQ within the *Host Serial Response Timeout*, the scanner sounds a transmit error and discards the data. The host must transmit an ENQ character at least every *Host Serial Response Timeout* to prevent transmission errors.

- **ACK/NAK with ENQ** - This combines the two previous options. An additional ENQ is not required to re-transmit data due to a NAK from the host.

- **XON/XOFF** - An XOFF character stops data transmission until the scanner receives an XON character. There are two situations for XON/XOFF:
  - The scanner receives an XOFF before it has data to send. When the scanner has data, it waits up to the *Host Serial Response Timeout* for an XON character before transmitting. If it does not receive the XON within this time, the scanner sounds a transmit error and discards the data.
  - The scanner receives an XOFF during data transmission and stops transmission after sending the current byte. When the scanner receives an XON character, it sends the rest of the data. The scanner waits indefinitely for the XON.

Software Handshaking (continued)
*None

ACK/NAK
ENQ
ACK/NAK with ENQ
XON/XOFF

Host Serial Response Timeout

Scan one of the following bar codes to specify how long the scanner waits for an ACK, NAK, or CTS before determining that a transmission error occurred. This only applies when in one of the ACK/NAK software handshaking modes, or RTS/CTS hardware handshaking mode.

*Minimum: 2 Seconds

Low: 2.5 Seconds
Medium: 5 Seconds

High: 7.5 Seconds
Maximum: 9.9 Seconds

RTS Line State

Scan one of the following bar codes to set the idle state of the serial host RTS line to **Low RTS** or **High RTS**.

*Host: Low RTS
Host: High RTS

Beep on <BEL>

Scan one of the following bar codes to set whether the scanner issues a beep when it detects a <BEL> character on the RS-232 serial line. <BEL> indicates an illegal entry or other important event.
**Beep On <BEL> Character
(Enable)**

***Do Not Beep On <BEL> Character
(Disable)**

Intercharacter Delay

Scan one of the following bar codes to specify the intercharacter delay inserted between character transmissions.

*Minimum: 0 msec
Low: 25 msec
Medium: 50 msec

High: 75 msec
Maximum: 99 msec

Nixdorf Beep/LED Options

If you selected Nixdorf Mode B, scan one of the following bar codes to indicate when the scanner beeps and turns on its LED after a decode.

*Normal Operation
(Beep/LED Immediately After Decode)
Beep/LED After Transmission
Beep/LED After CTS Pulse

Bar Codes with Unknown Characters

Unknown characters are characters the host does not recognize. Scan **Send Bar Codes With Unknown Characters** to send all bar code data except for unknown characters. The scanner issues no error beeps.

Scan **Do Not Send Bar Codes With Unknown Characters** to send bar code data up to the first unknown character. The scanner issues an error beep.
*Send Bar Codes With Unknown Characters
Do Not Send Bar Codes With Unknown Characters

ASCII Character Set for RS-232

See *Appendix I, ASCII Character Sets* for Prefix/Suffix values. The values in *Table I-1* can be assigned as prefixes or suffixes for ASCII character data transmission.

CHAPTER 10 IBM 468X / 469X INTERFACE

Introduction

This chapter describes how to set up the scanner with an IBM 468X/469X host.

The scanner ships with the settings shown in *Table 10-1 on page 10-3* (also see *Appendix A, Standard Default Parameters* for all defaults). If the default values suit requirements, programming is not necessary.

Setting Parameters

To set feature values, scan a single bar code or a short bar code sequence. The settings are stored in non-volatile memory and are preserved even when the scanner powers down.

✓ **NOTE** Most computer monitors allow scanning bar codes directly on the screen. When scanning from the screen, be sure to set the document magnification to a level where you can see the bar code clearly, and bars and/or spaces do not merge.

To return all features to default values, scan *Set Factory Defaults on page 5-5*. Throughout the programming bar code menus, asterisks (*) indicate default values.

* Indicates default   ***Enable Parameter**   Feature/option

Scanning Sequence Examples

In most cases scanning one bar code sets the parameter value. For example, to select the Port 9B address, scan the **Hand-Held Scanner Emulation (Port 9B)** bar code under *Port Address on page 10-4*. The scanner issues a fast warble beep and the LED turns green, signifying a successful parameter entry.

Other parameters require scanning several bar codes. See the parameter descriptions for this procedure.

Errors While Scanning

Unless otherwise specified, to correct an error during a scanning sequence, just re-scan the correct parameter.

Connecting an IBM 468X/469X Host

Connect the scanner directly to the host computer.
**Figure 10-1** *IBM Connection*

✓ **NOTE** Interface cables vary depending on configuration. The connectors can be different than those illustrated in *Figure 10-1*, but the steps to connect the scanner are the same.

1. Attach the modular connector of the IBM 46XX interface cable to the cable interface port on the scanner. See *Installing the Interface Cable on page 1-3*.

2. Connect the other end of the IBM 46XX interface cable to the appropriate port on the host (typically Port 9).

3. The scanner automatically detects the host interface type, but there is no default setting. Scan the appropriate bar code from *Port Address on page 10-4* to select the port address.

4. To modify any other parameter options, scan the appropriate bar codes in this chapter.

✓ **NOTE** The only required configuration is the port address. The IBM system typically controls other scanner parameters.

If problems occur with the system, see *Troubleshooting on page 4-3*.

IBM Parameter Defaults

Table 10-1 lists defaults for IBM host parameters. Change these values in one of two ways:

- Scan the appropriate bar codes in this chapter. The new value replaces the standard default value in memory. To recall default parameter values, see *Default Parameters on page 5-5*.

- Configure the scanner using the 123Scan[2] configuration program. See *Chapter 2, 123Scan and Software Tools*.

✓ *NOTE* See *Appendix A, Standard Default Parameters* for all user preference, host, symbology, and miscellaneous default parameters.

Table 10-1   *IBM 468X/469X Interface Parameter Defaults*

Parameter	Default	Page Number
IBM 468X/469X Host Parameters		
Port Address	None	*10-4*
Convert Unknown to Code 39	Disable	*10-5*
RS-485 Beep Directive	Ignore	*10-5*
RS-485 Bar Code Configuration Directive	Ignore	*10-6*
IBM-485 Specification Version	Original Specification	*10-6*

IBM Host Parameters

Port Address

Scan one of the following bar codes to select the IBM 468X/469X port.

✓ *NOTE* Scanning a Port Address bar code enables the RS-485 interface on the scanner.

✓ *NOTE* For a list of supported scanner functionality by communication protocol, see
Appendix J, Communication Protocol Functionality.
*None

Hand-Held Scanner Emulation (Port 9B)
Non-IBM Scanner Emulation (Port 5B)

Table-Top Scanner Emulation (Port 17)

Convert Unknown to Code 39

Scan one of the following bar codes to enable or disable converting unknown bar code type data to Code 39.

Enable Convert Unknown to Code 39

***Disable Convert Unknown to Code 39**

RS-485 Beep Directive

The IBM RS-485 host can send a beeper configuration request to the scanner. Scan **Ignore Beep Directive** to prevent the scanner from processing the host request. All directives are still acknowledged to the host as if they were processed.

Honor Beep Directive

***Ignore Beep Directive**

RS-485 Bar Code Configuration Directive

The IBM RS-485 host can enable and disable code types. Scan **Ignore Bar Code Configuration Directive** to prevent the scanner from processing the host request. All directives are still acknowledged to the IBM RS-485 host as if they were processed.

Honor Bar Code Configuration Directive

*Ignore Bar Code Configuration Directive

IBM-485 Specification Version

Parameter # 1729 (SSI # F8h 06h C1h)

The IBM interface specification version selected defines how code types are reported over the IBM interface.

When you scan **Original Specification**, only Symbologies that were historically supported on each individual port are reported as known. When you scan Version 2.0, all Symbologies covered in the newer IBM specification are reported as known with their respective code types.
***Original Specification
(0)**

**Version 2.0
(1)**

CHAPTER 11 KEYBOARD WEDGE INTERFACE

Introduction

This chapter describes how to set up a keyboard wedge interface with the scanner. The scanner connects between the keyboard and host computer and translates bar code data into keystrokes, which the host accepts as if they originated from the keyboard. This mode adds bar code reading functionality to a system designed for manual keyboard input. Keyboard keystrokes are simply passed through.

The scanner ships with the settings shown in *Table 11-1 on page 11-3* (also see *Appendix A, Standard Default Parameters* for all defaults). If the default values suit requirements, programming is not necessary.

Setting Parameters

To set feature values, scan a single bar code or a short bar code sequence. The settings are stored in non-volatile memory and are preserved even when the scanner powers down.

✓ **NOTE** Most computer monitors allow scanning bar codes directly on the screen. When scanning from the screen, be sure to set the document magnification to a level where you can see the bar code clearly, and bars and/or spaces do not merge.

To return all features to default values, scan a bar code in *Default Parameters on page 5-5*. Throughout the programming bar code menus, asterisks (*) indicate default values.
* Indicates default ⟋ ***Enable Parameter*** ‾‾‾ Feature/option

Scanning Sequence Examples

In most cases, scanning one bar code sets the parameter value. For example, to select a medium keystroke delay, scan the **Medium Delay (20 msec)** bar code under *Keystroke Delay on page 11-5*. The scanner issues a fast warble beep and the LED turns green, signifying a successful parameter entry.

Other parameters require scanning several bar codes. See the parameter descriptions for this procedure.

Errors While Scanning

Unless otherwise specified, to correct an error during a scanning sequence, just re-scan the correct parameter.

Connecting a Keyboard Wedge Interface

Figure 11-1   *Keyboard Wedge Connection*

> ✓ **NOTE** Interface cables vary depending on configuration. The connectors can be different than those illustrated in *Figure 11-1*, but the steps to connect the scanner are the same.

1. Turn off the host and unplug the keyboard connector.
2. Attach the modular connector of the Y-cable to the cable interface port on the digital scanner. See *Installing the Interface Cable on page 1-3*.
3. Connect the round male DIN host connector of the Y-cable to the keyboard port on the host device.
4. Connect the round female DIN keyboard connector of the Y-cable to the keyboard connector.
5. If required, attach the optional power supply to the connector in the middle of the Y-cable.
6. Ensure that all connections are secure.
7. Turn on the host system.
8. The digital scanner automatically detects the host interface type and uses the default setting. If the default (*) does not meet your requirements, scan *IBM PC/AT & IBM PC Compatibles on page 11-4*.
9. To modify any other parameter options, scan the appropriate bar codes in this guide.

If problems occur with the system, see *Troubleshooting on page 4-3*.

Keyboard Wedge Parameter Defaults

Table 11-1 lists the defaults for Keyboard Wedge host parameters. To change any option, scan the appropriate bar code(s) in *Keyboard Wedge Host Parameters on page 11-4*.

✓ **NOTE** See *Appendix B, Country Codes* for Keyboard Wedge Country Keyboard Types (Country Codes).

See *Appendix A, Standard Default Parameters* for all user preferences, hosts, symbologies, and miscellaneous default parameters.

Table 11-1 *Keyboard Wedge Host Default Table*

Parameter	Default	Page Number
Keyboard Wedge Host Parameters		
Keyboard Wedge Host Type	IBM AT Notebook	*11-4*
Bar Codes with Unknown Characters	Send Bar Codes with Unknown Characters	*11-4*
Keystroke Delay	No Delay	*11-5*
Intra-keystroke Delay	Disable	*11-5*
Alternate Numeric Keypad Emulation	Enable	*11-6*
Quick Keypad Emulation	Enable	*11-6*
Simulated Caps Lock	Disable	*11-7*
Caps Lock Override	Disable	*11-7*
Convert Case	Do Not Convert	*11-8*
Function Key Mapping	Disable	*11-8*
FN1 Substitution	Disable	*11-9*
Send Make and Break	Send	*11-9*

Keyboard Wedge Host Parameters

Keyboard Wedge Host Types

Select the Keyboard Wedge host by scanning one of the bar codes below.

> ✓ **NOTE** For a list of supported scanner functionality by communication protocol, see
> *Appendix J, Communication Protocol Functionality*.

IBM PC/AT & IBM PC Compatibles
*IBM AT Notebook

Bar Codes with Unknown Characters

Unknown characters are characters the host does not recognize. Scan **Send Bar Codes With Unknown Characters** to send all bar code data except for unknown characters. The scanner issues no error beeps.

Scan **Do Not Send Bar Codes With Unknown Characters** to send bar code data up to the first unknown character. The scanner issues an error beep.

*Send Bar Codes with Unknown Characters
Do Not Send Bar Codes with Unknown Characters

Keystroke Delay

This is the delay in milliseconds between emulated keystrokes. Scan one of the following bar codes to increase the delay when hosts require a slower data transmission.

*No Delay

Medium Delay (20 msec)
Long Delay (40 msec)

Intra-keystroke Delay

Scan **Enable Intra-keystroke Delay** to insert an additional delay between each emulated key press and release. This also sets *Keystroke Delay* to a minimum of 5 msec.

Enable Intra-keystroke Delay
*Disable Intra-keystroke Delay

Alternate Numeric Keypad Emulation

This allows emulation of most other country keyboard types not listed in *Appendix B, Country Codes* in a Microsoft® operating system environment.

✓ *NOTE* If your keyboard type is not listed in the country code list (see *USB and Keyboard Wedge Country Keyboard Types (Country Codes) on page B-2*), disable *Quick Keypad Emulation on page 11-6* and ensure *Alternate Numeric Keypad Emulation on page 11-6* is enabled.
*Enable Alternate Numeric Keypad

Disable Alternate Numeric Keypad

Quick Keypad Emulation

This enables faster keypad emulation where character value sequences are only sent for characters not found on the keyboard.

✓ *NOTE* This option applies only when *Alternate Numeric Keypad Emulation* is enabled.

*Enable Quick Keypad Emulation

Disable Quick Keypad Emulation

Simulated Caps Lock

Scan **Enable Caps Lock** to invert upper and lower case characters on the bar code as if the Caps Lock state is enabled on the keyboard. This inversion occurs regardless of the keyboard's Caps Lock state. Note that Simulated Caps Lock applies to ASCII alpha characters only.

Enable Caps Lock
*Disable Caps Lock

Caps Lock Override

Scan **Enable Caps Lock Override** for AT or AT Notebook hosts to preserve the case of the data regardless of the state of the Caps Lock key. Therefore, an 'A' in the bar code transmits as an 'A' regardless of the setting of the keyboard's Caps Lock key.

Enable Caps Lock Override

*Disable Caps Lock Override

✓ **NOTE** If both Simulated Caps Lock and Caps Lock Override are enabled, Caps Lock Override takes precedence.

Convert Case

Scan one of the following bar codes to convert all bar code data to the selected case.

✓ *NOTE* Convert Case applies to ASCII characters only.

Convert to Upper Case

Convert to Lower Case

*Do Not Convert

Function Key Mapping

ASCII values under 32 are normally sent as control key sequences (see *Table I-1 on page I-1*). Scan **Enable Function Key Mapping** to send the keys in bold in place of the standard key mapping. Table entries that do not have a bold entry remain the same whether or not you enable this parameter.

Enable Function Key Mapping
*Disable Function Key Mapping

FN1 Substitution

Scan **Enable FN1 Substitution** to replace FN1 characters in an EAN128 bar code with a user-selected keystroke (see *FN1 Substitution Values on page 5-34*).

Enable FN1 Substitution
*Disable FN1 Substitution

Send Make and Break

Scan **Send Make and Break Scan Codes** to prevent sending the scan codes for releasing a key.

*Send Make and Break Scan Codes

Send Make Scan Code Only

✓ *NOTE* Windows-based systems must use **Send Make and Break Scan Codes**.

Keyboard Map

The following keyboard map is a reference for prefix/suffix keystroke parameters. To program the prefix/suffix values, see the bar codes on *page 5-31*.
Figure 11-2 *IBM PS2 Type Keyboard*

ASCII Character Set for Keyboard Wedge

✓ **NOTE** Code 39 Full ASCII interprets the bar code special character ($ + % /) preceding a Code 39 character and assigns an ASCII character value to the pair. For example, if you enable Code 39 Full ASCII and scan **+B**, it transmits as **b**, **%J** as **?**, and **%V** as **@**. Scanning **ABC%I** outputs the keystroke equivalent of **ABC >.**

See *Appendix I, ASCII Character Sets* for the following:

- ASCII Character Set (*Table I-1 on page I-1*)
- ALT Key Character Set (*Table I-2 on page I-6*)
- GUI Key Character Set (*Table I-3 on page I-7*)
- F Key Character Set (*Table I-5 on page I-10*)
- Numeric Key Character Set (*Table I-6 on page I-11*)
- Extended Key Character Set (*Table I-7 on page I-12*).

CHAPTER 12 SYMBOLOGIES

Introduction

You can program the scanner to perform various functions, or activate different features. This chapter describes symbology features and provides programming bar codes for selecting these features.

The scanner ships with the settings shown in *Table 12-1 on page 12-2* (also see *Appendix A, Standard Default Parameters* for all defaults). If the default values suit requirements, programming is not necessary.

Setting Parameters

To set feature values, scan a single bar code or a short bar code sequence. The settings are stored in non-volatile memory and are preserved even when the scanner powers down.

✓ *NOTE* Most computer monitors allow scanning bar codes directly on the screen. When scanning from the screen, be sure to set the document magnification to a level where you can see the bar code clearly, and bars and/or spaces do not merge.

If not using a USB cable, select a host type (see each host chapter for specific host information) after the power-up beeps sound. This is only necessary upon the first power-up when connected to a new host.

To return all features to default values, see *Default Parameters on page 5-5*. Throughout the programming bar code menus, asterisks (*) indicate default values.
*Enable Parameter

* Indicates default   Feature/option

Scanning Sequence Examples

In most cases, scanning one bar code sets the parameter value. For example, to transmit bar code data without the UPC-A check digit, scan the **Do Not Transmit UPC-A Check Digit** bar code under *Transmit UPC-A Check Digit on page 12-18*. The scanner issues a fast warble beep and the LED turns green, signifying a successful parameter entry.

Other parameters, such as **Set Lengths for D 2 of 5,** require scanning several bar codes. See the parameter descriptions for this procedure.

Errors While Scanning

Unless otherwise specified, to correct an error during a scanning sequence, just re-scan the correct parameter.

Symbology Parameter Defaults

Table 12-1 lists defaults for all symbology parameters. Change these values in one of two ways:

- Scan the appropriate bar codes in this chapter. The new value replaces the standard default value in memory. To recall the default parameter values, see *Default Parameters on page 5-5*.

- Configure the scanner using the 123Scan[2] configuration program. See *Chapter 12, Symbologies*.

✓ **NOTE** See *Appendix A, Standard Default Parameters* for all user preference, host, symbology, and miscellaneous default parameters.

Table 12-1 *Symbology Parameter Defaults*

Scan one of the following bar codes to enable or disable ISSN EAN.

Enable ISSN EAN
(1)

*Disable ISSN EAN
(0)

Decode UPC/EAN/JAN Supplementals

Parameter # 16

SSI # 10h

Supplementals are bar codes appended according to specific format conventions (e.g., UPC A+2, UPC E+2, EAN 13+2). The following options are available:

- **Decode UPC/EAN/JAN with Supplementals Only** - The scanner only decodes UPC/EAN/JAN symbols with supplemental characters, and ignores symbols without supplementals.
- **Ignore UPC/EAN/JAN Supplementals** - When presented with a UPC/EAN/JAN plus supplemental symbol, the scanner decodes UPC/EAN/JAN and ignores the supplemental characters.
- **Autodiscriminate UPC/EAN/JAN with Supplementals** - The scanner decodes UPC/EAN/JAN symbols with supplemental characters immediately. If the symbol does not have a supplemental, the scanner must decode the bar code the number of times set via *UPC/EAN/JAN Supplemental Redundancy on page 12-16* before transmitting its data to confirm that there is no supplemental.

Select one of the following **Supplemental Mode** options to immediately transmit EAN-13 bar codes starting with that prefix that have supplemental characters. If the symbol does not have a supplemental, the scanner must decode the bar code the number of times set via *UPC/EAN/JAN Supplemental Redundancy on page 12-16* before transmitting the data to confirm that there is no supplemental. The scanner transmits UPC/EAN/JAN bar codes that do not have that prefix immediately.

- **Enable 378/379 Supplemental Mode**
- **Enable 978/979 Supplemental Mode**

> **NOTE** If you select 978/979 Supplemental Mode and are scanning Bookland EAN bar codes, see *Bookland EAN on page 12-11* to enable Bookland EAN, and select a format using *Bookland ISBN Format on page 12-12*.

- **Enable 977 Supplemental Mode**
- **Enable 414/419/434/439 Supplemental Mode**
- **Enable 491 Supplemental Mode**
- **Enable Smart Supplemental Mode** - This applies to EAN-13 bar codes starting with any prefix listed previously.
- **Supplemental User-Programmable Type 1** - This applies to EAN-13 bar codes starting with a 3-digit user-defined prefix. Set this using *User-Programmable Supplementals on page 12-16*.
- **Supplemental User-Programmable Type 1 and 2 -** This applies to EAN-13 bar codes starting with either of two 3-digit user-defined prefixes. Set the prefixes using *User-Programmable Supplementals on page 12-16*.
- **Smart Supplemental Plus User-Programmable 1** - This applies to EAN-13 bar codes starting with any prefix listed previously or the prefix set using *User-Programmable Supplementals on page 12-16*.
- **Smart Supplemental Plus User-Programmable 1 and 2 -** This applies to EAN-13 bar codes starting with any prefix listed previously or one of the two user-defined prefixes set using *User-Programmable Supplementals on page 12-16*.

> **NOTE** To minimize the risk of invalid data transmission, select either to decode or ignore supplemental characters.

User-Programmable Supplementals

Supplemental 1: Parameter # 579
SSI # F1h 43h

Supplemental 2: Parameter # 580
SSI # F1h 44h

If you selected a Supplemental User-Programmable option from *Decode UPC/EAN/JAN Supplementals on page 12-13*, scan **User-Programmable Supplemental 1**, and then scan three bar codes from *Appendix G, Numeric Bar Codes* to set the 3-digit prefix. To set a second 3-digit prefix, scan **User-Programmable Supplemental 2**, and then scan three bar codes from *Appendix G, Numeric Bar Codes*. The default is 000 (zeroes).

User-Programmable Supplemental 1

User-Programmable Supplemental 2

UPC/EAN/JAN Supplemental Redundancy

Parameter # 80

SSI # 50h

If you selected **Autodiscriminate UPC/EAN/JAN with Supplementals**, this option sets the number of times to decode a symbol without supplementals before transmission. The range is from two to 30. Five or above is recommended when decoding a mix of UPC/EAN/JAN symbols with and without supplementals.
The default is 10.

To set a redundancy value, scan the following bar code, and then scan two bar codes from *Appendix G, Numeric Bar Codes*. Enter a leading zero for single digit numbers. To correct an error or change a selection, scan *Cancel on page G-3*.
UPC/EAN/JAN Supplemental Redundancy

UPC/EAN/JAN Supplemental AIM ID Format

Parameter # 672

SSI # F1h A0h

If *Transmit Code ID Character on page 5-30* is set to **AIM Code ID Character**, scan one of the following bar codes to select an output format when reporting UPC/EAN/JAN bar codes with supplementals:

- **Separate** - Transmit UPC/EAN/JAN with supplementals with separate AIM IDs but one transmission, i.e.,

  ]E<0 or 4><data>]E<1 or 2>[supplemental data]

- **Combined** – Transmit UPC/EAN/JAN with supplementals with one AIM ID and one transmission, i.e.,

  ]E3<data+supplemental data>

- **Separate Transmissions** - Transmit UPC/EAN/JAN with supplementals with separate AIM IDs and separate transmissions, i.e.,

  ]E<0 or 4><data>
  ]E<1 or 2>[supplemental data]

Disable Code 128
(0)

Set Lengths for Code 128

L1 = Parameter # 209
SSI # D1h

L2 = Parameter # 210
SSI # D2h

> ✓ *NOTE* The maximum number of 1D bar code characters readable with scanner depends on the type of symbology, type of characters (i.e., digits or letters), printing density, and quality. For reference, the DS2208 reads 3.1 in wide, 10mil 1D bar codes printed with 1200dpi resolution and 80% contrast.

The length of a code refers to the number of characters (i.e., human readable characters), including check digit(s) the code contains. Set lengths for Code 128 to any length, one or two discrete lengths, or lengths within a specific range. Minimum and maximum length range is from 0 - 80. The default minimum and maximum length range is from 1 - 55.

> ✓ *NOTE* When setting lengths, enter a leading zero for single digit numbers.

Scan one of the following bar codes to select a length option:

- **One Discrete Length** - Decode only Code 128 symbols containing a selected length. Select the length using the bar codes in *Appendix G, Numeric Bar Codes*. For example, to decode only Code 128 symbols with 14 characters, scan **Code 128 - One Discrete Length**, and then scan **1, 4**. To correct an error or change the selection, scan *Cancel on page G-3*.
- **Two Discrete Lengths** - Decode only Code 128 symbols containing either of two lengths. Select lengths using the bar codes in *Appendix G, Numeric Bar Codes*. For example, to decode only Code 128 symbols containing either 2 or 14 characters, scan **Code 128 - Two Discrete Lengths**, and then scan **0, 2, 1, 4**. To correct an error or change the selection, scan *Cancel on page G-3*.
- **Length Within Range** - Decode Code 128 symbols with a specific length range. Select lengths using the bar codes in *Appendix G, Numeric Bar Codes*. For example, to decode Code 128 symbols containing between 4 and 12 characters, scan **Code 128 - Length Within Range**, and then scan **0, 4, 1, 2**. To correct an error or change the selection, scan *Cancel on page G-3*.

Set Lengths for Code 128 (continued)

- **Any Length** - Decode Code 128 symbols containing any number of characters within the scanner's capability.
Code 128 - One Discrete Length

Code 128 - Two Discrete Lengths
***Code 128 - Length Within Range
(Default: 1 - 55)**

(0)**

ISBT 128

Parameter # 84

SSI # 54h

ISBT 128 is a variant of Code 128 used in the blood bank industry. Scan one of the following bar codes to enable or disable ISBT 128.

Enable ISBT 128
(1)

*Disable ISBT 128
(0)

ISBT Concatenation

Parameter # 577

SSI # F1h 41h

Select an option for concatenating pairs of ISBT code types:

- **Enable ISBT Concatenation** - There must be two ISBT codes in order for the scanner to decode and perform concatenation. The scanner does not decode single ISBT symbols.
- **Disable ISBT Concatenation** - The scanner does not concatenate pairs of ISBT codes it encounters.
- **Autodiscriminate ISBT Concatenation** - The scanner decodes and concatenates pairs of ISBT codes immediately. If only a single ISBT symbol is present, the scanner must decode the symbol the number of times set via *ISBT Concatenation Redundancy on page 12-30* before transmitting its data to confirm that there is no additional ISBT symbol.

Enable ISBT Concatenation
(1)

*Disable ISBT Concatenation
(0)

Autodiscriminate ISBT Concatenation
(2)

Check ISBT Table

Parameter # 578

SSI # F1h 42h

The ISBT specification includes a table that lists several types of ISBT bar codes that are commonly used in pairs. If you set **ISBT Concatenation** to **Enable**, enable **Check ISBT Table** to concatenate only those pairs found in this table. Other types of ISBT codes are not concatenated.

***Enable Check ISBT Table
(1)**

**Disable Check ISBT Table
(0)**

ISBT Concatenation Redundancy

Parameter # 223

SSI # DFh

If *ISBT Concatenation on page 12-29* is set to **Autodiscriminate ISBT Concatenation** (default), you can set the number of times the scanner must decode an ISBT symbol before determining that there is no additional symbol. To do so, scan **ISBT Concatenation Redundancy** below and then scan bar codes in *Appendix G, Numeric Bar Codes* to set a value between 2 and 20. Enter a leading zero for single digit numbers. To correct an error or change a selection, scan *Cancel on page G-3*. The default is 10.

ISBT Concatenation Redundancy

Code 128 <FNC4>

Parameter # 1254

SSI # F8h 04h E6h

This feature applies to Code 128 bar codes with an embedded <FNC4> character. Select **Ignore Code 128 <FNC4>** to strip the <FNC4> character from the decode data. The remaining characters are sent to the host unchanged. When disabled, the <FNC4> character is processed normally as per Code 128 standard.

***Honor Code 128 <FNC4>
(0)**

**Ignore Code 128 <FNC4>
(1)**

Code 128 Security Level

Parameter # 751

SSI # F1h EFh

Code 128 bar codes are vulnerable to misdecodes, particularly when Code 128 Lengths is set to **Any Length**. The scanner offers four levels of decode security for Code 128 bar codes. There is an inverse relationship between security and scanner aggressiveness. Increasing the level of security can reduce scanning aggressiveness, so select only the level of security necessary.

- **Code 128 Security Level 0** - The scanner operates in its most aggressive state, while providing sufficient security in decoding most in-spec bar codes.
- **Code 128 Security Level 1** - This option eliminates most misdecodes while maintaining reasonable aggressiveness.
- **Code 128 Security Level 2** - This option applies greater bar code security requirements if **Security Level 1** fails to eliminate misdecodes.
- **Code 128 Security Level 3** - If you selected **Security Level 2**, and misdecodes still occur, select this security level to apply the highest safety requirements.

    ✓ *NOTE* Selecting this option is an extreme measure against mis-decoding severely out-of-spec bar codes, and significantly impairs the decoding ability of the scanner. If this level of security is required, try to improve the quality of the bar codes.

L2 = Parameter # 29
SSI # 1Dh

NOTE The maximum number of 1D bar code characters readable with scanner depends on the type of symbology, type of characters (i.e., digits or letters), printing density, and quality. For reference, the DS2208 reads 3.1 in wide, 10mil 1D bar codes printed with 1200dpi resolution and 80% contrast.

The length of a code refers to the number of characters (i.e., human readable characters), including check digit(s) the code contains. Set lengths for Code 11 to any length, one or two discrete lengths, or lengths within a specific range. Minimum and maximum length range is from 0 - 55. The default minimum and maximum length range is from 4 - 55.

NOTE When setting lengths, enter a leading zero for single digit numbers.

Scan one of the following bar codes to select a length option:

- **One Discrete Length** - Decode only Code 11 symbols containing a selected length. Select the length using the bar codes in *Appendix G, Numeric Bar Codes*. For example, to decode only Code 11 symbols with 14 characters, scan **Code 11 - One Discrete Length**, and then scan **1, 4**. To correct an error or change the selection, scan *Cancel on page G-3*.

Set Lengths for Code 11 (continued)

- **Two Discrete Lengths** - Decode only Code 11 symbols containing either of two lengths. Select lengths using the bar codes in *Appendix G, Numeric Bar Codes*. For example, to decode only Code 11 symbols containing either 2 or 14 characters, scan **Code 11 - Two Discrete Lengths**, and then scan **0**, **2**, **1**, **4**. To correct an error or change the selection, scan *Cancel on page G-3*.

- **Length Within Range** - Decode Code 11 symbols with a specific length range. Select lengths using the bar codes in *Appendix G, Numeric Bar Codes*. For example, to decode Code 11 symbols containing between 4 and 12 characters, scan **Code 11 - Length Within Range**, and then scan **0**, **4**, **1, 2**. To correct an error or change the selection, scan *Cancel on page G-3*.

- **Any Length** - Decode Code 11 symbols containing any number of characters within the scanner's capability.

Febraban

Parameter # 1750

SSI # F8h 06h D6h

Febraban is an I 2 of 5 barcode of length 44 that requires special check characters to be inserted in the transmitted data stream. When enabled, the I 2 of 5 internal check digit calculation and transmission is disabled. When disabled, all I 2 of 5 functionality works as usual.

Recommendations for Length Setting

I 2 of 5 Length 1: Larger of the fixed length and the FEBRABAN length (==44).

I 2 of 5 Length 2: Smaller of the fixed length and the FEBRABAN length (==44).

**Enable Febraban
(1)**

***Disable Febraban
(0)**

I 2 of 5 Security Level

Parameter # 1121

SSI # F8h 04h 61h

Interleaved 2 of 5 bar codes are vulnerable to misdecodes, particularly when I 2 of 5 Lengths is set to **Any Length**. The scanner offers four levels of decode security for Interleaved 2 of 5 bar codes. There is an inverse relationship between security and scanner aggressiveness. Increasing the level of security can reduce scanning aggressiveness, so select only the level of security necessary.

- **I 2 of 5 Security Level 0:** The scanner operates in its most aggressive state, while providing sufficient security in decoding most in-spec bar codes.
- **I 2 of 5 Security Level 1:** A bar code must be successfully read twice, and satisfy certain safety requirements before being decoded. This default setting eliminates most misdecodes.
- **I 2 of 5 Security Level 2:** This option applies greater bar code security requirements if **Security Level 1** fails to eliminate misdecodes.
- **I 2 of 5 Security Level 3:** If you selected **Security Level 2**, and misdecodes still occur, select this security level. The highest safety requirements are applied. A bar code must be successfully read three times before being decoded.

> ✓ *NOTE* Selecting this option is an extreme measure against mis-decoding severely out-of-spec bar codes, and significantly impairs the decoding ability of the scanner. If this level of security is required, try to improve the quality of the bar codes.

Convert GS1 DataBar to UPC/EAN/JAN

Parameter # 397

SSI # F0h, 8Dh

This parameter only applies to GS1 DataBar Omnidirectional and GS1 DataBar Limited symbols not decoded as part of a Composite symbol. Scan **Enable Convert GS1 DataBar to UPC/EAN/JAN** to strip the leading '010' from DataBar-14 and DataBar Limited symbols encoding a single zero as the first digit, and report the bar code as EAN-13.

For bar codes beginning with between two and five zeros, this strips the leading '0100' and reports the bar code as UPC-A. The *UPC-A Preamble* option that transmits the system character and country code applies to converted bar codes. Note that neither the system character nor the check digit can be stripped.

Enable Convert GS1 DataBar to UPC/EAN/JAN
(1)

*Disable Convert GS1 DataBar to UPC/EAN/JAN
(0)

GS1 DataBar Limited Margin Check

Parameter # 728

SSI # F1h D8h

The decoder offers four levels of margin check for GS1 DataBar Limited bar codes. There is an inverse relationship between level of margin check and decoder aggressiveness. Increasing the level of margin check may result in reduced aggressiveness in scanning, so only choose the level of margin check necessary.

- Level 1: No clear margin required. This complies with the original GS1 standard, yet might result in erroneous decoding of the DataBar Limited bar code when scanning some UPC symbols that start with the digits 9 and 7.

- Level 2: Automatic risk detection. This level of security may result in erroneous decoding of DataBar Limited bar codes when scanning some UPC symbols. If a misdecode is detected, the decoder operates in Level 3 or Level 1.

- Level 3: Margin check level reflects newly proposed GS1 standard that requires a 5x trailing clear margin.

- Level 4: Margin check level extends beyond the standard required by GS1. This level of security requires a 5x leading and trailing clear margin.

GS1 DataBar Limited Margin Check Level 1

Symbology-Specific Security Features

Redundancy Level

Parameter # 78

SSI # 4Eh

The scanner offers four levels of decode redundancy. Select higher redundancy levels for decreasing levels of bar code quality. As redundancy levels increase, the scanner's aggressiveness decreases.

Scan one of the following bar codes to select the redundancy level appropriate for the bar code quality:

- **Redundancy Level 1** - The scanner must read the following code types twice before decoding:
  - Codabar (8 characters or less)
  - MSI (4 characters or less)
  - D 2 of 5 (8 characters or less)
  - I 2 of 5 (8 characters or less)
- **Redundancy Level 2** - The scanner must read all code types twice before decoding.
- **Redundancy Level 3** - The scanner must read code types other than the following twice before decoding, but must read the following codes three times:
  - Codabar (8 characters or less)
  - MSI (4 characters or less)
  - D 2 of 5 (8 characters or less)
  - I 2 of 5 (8 characters or less)
- **Redundancy Level 4** - The scanner must read all code types three times before decoding.

Redundancy Level (continued)
*Redundancy Level 1
(1)

Redundancy Level 2
(2)

Redundancy Level 3
(3)

Redundancy Level 4
(4)

Security Level

Parameter # 77

SSI # 4Dh

The scanner offers four levels of decode security for delta bar codes, which include the Code 128 family, UPC/EAN/JAN, and Code 93. Select increasing levels of security for decreasing levels of bar code quality. There is an inverse relationship between security and scanner aggressiveness, so choose only that level of security necessary for the application.

- **Security Level 0** - The scanner operates in its most aggressive state, while providing sufficient security decoding most "in-spec" bar codes.
- **Security Level 1** - This default setting eliminates most misdecodes.
- **Security Level 2** - Select this option if Security Level 1 fails to eliminate misdecodes.
- **Security Level 3** - If you selected Security Level 2 and misdecodes still occur, select this security level.

> **NOTE** Selecting this option is an extreme measure against mis-decoding severely out-of-spec bar codes, and significantly impairs the decoding ability of the scanner. If this level of security is required, try to improve the quality of the bar codes.

Security Level 0

*Security Level 1
(1)

Security Level 2
(2)

Security Level 3
(3)

1D Quiet Zone Level

Parameter # 1288

SSI # F8h 05h 08h

This feature sets the level of aggressiveness when decoding bar codes with a reduced quiet zone (the margin on either side of a bar code), and applies to symbologies enabled by a Reduced Quiet Zone parameter. Because higher levels increase the decoding time and risk of misdecodes, Zebra strongly recommends enabling only the symbologies which require higher quiet zone levels, and leaving Reduced Quiet Zone disabled for all other symbologies. Options are:

- **1D Quiet Zone Level 0** - The scanner performs normally in terms of quiet zone.
- **1D Quiet Zone Level 1** - The scanner performs more aggressively in terms of quiet zone.
- **1D Quiet Zone Level 2** - The scanner only requires a quiet zone at the end of bar code for decoding.
- **1D Quiet Zone Level 3** - The scanner decodes anything in terms of quiet zone or end of bar code.
**1D Quiet Zone Level 0
(0)**

***1D Quiet Zone Level 1
(1)**

**1D Quiet Zone Level 2
(2)**

**1D Quiet Zone Level 3
(3)**

Intercharacter Gap Size

Parameter # 381

SSI # F0h, 7Dh

The Code 39 and Codabar symbologies have an intercharacter gap that is typically quite small. Due to various bar code printing technologies, this gap can grow larger than the maximum size allowed, preventing the scanner from decoding the symbol. If this problem occurs, scan the **Large Intercharacter Gaps** parameter to tolerate these out-of-specification bar codes.

*Normal Intercharacter Gaps
(6)

Large Intercharacter Gaps
(10)

Composite

Composite CC-C

Parameter # 341

SSI # F0h 55h

Scan one of the following bar codes to enable or disable Composite bar codes of type CC-C.

Enable CC-C
(1)

*Disable CC-C
(0)

Composite CC-A/B

Parameter # 342

SSI # F0h 56h

Scan one of the following bar codes to enable or disable Composite bar codes of type CC-A/B.
Enable CC-A/B
(1)
***Disable CC-A/B**
(0)

Composite TLC-39

Parameter # 371

SSI # F0h 73h

Scan one of the following bar codes to enable or disable Composite bar codes of type TLC-39.
Enable TLC39
(1)

***Disable TLC39**
(0)

Composite Inverse

Parameter # 1113

SSI # F8h 04h 59h

This parameter sets Composite for either regular decode or inverse decode. This mode only supports Inverse Composite that has DataBar combined with CCAB. No other 1D/2D combinations.

- **Regular Only**: The digital scanner decodes regular Composite bar codes only. (default).

- **Inverse Only**: The digital scanner decodes inverse Composite bar codes only. For this parameter to work as expected, *Composite CC-A/B on page 12-79* and corresponding 1D Inverse or 1D Inverse Autodetect (*page 12-69*) must be enabled.

> ✓ *NOTE* To decode regular Composite, Composite Inverse must be set to **Regular Only** and Inverse 1D must be set to **Regular Only** or **Autodetect**.
>
> To decode inverse Composite, Composite Inverse must be set to **Inverse Only** and Inverse 1D must be set to **Inverse Only** or **Autodetect**.

*** Regular Only
(0)**

**Inverse Only
(1)**

UPC Composite Mode

Parameter # 344

SSI # F0h 58h

Select an option for linking UPC symbols with a 2D symbol during transmission as if they were one symbol:

- **UPC Never Linked** - Transmit UPC bar codes regardless of whether a 2D symbol is detected.
- **UPC Always Linked** - Transmit UPC bar codes and the 2D portion. If 2D is not present, do not transmit the bar code.
- **Autodiscriminate UPC Composites** - The scanner determines if there is a 2D portion, then transmits the UPC, as well as the 2D portion if present.
*UPC Never Linked
(0)

UPC Always Linked
(1)

Autodiscriminate UPC Composites
(2)

Composite Beep Mode

Parameter # 398

SSI # F0h, 8Eh

Scan one of the following bar codes to select the number of decode beeps that sound upon decoding a Composite bar code.
Single Beep After Both are Decoded
(0)

*Beep as Each Code Type is Decoded
(1)
Double Beep After Both are Decoded
(2)

GS1-128 Emulation Mode for UCC/EAN Composite Codes

Parameter # 427

SSI # F0h, ABh

Scan one of the following bar codes to enable or disable this mode.

Enable GS1-128 Emulation Mode for
UCC/EAN Composite Codes
(1)

*Disable GS1-128 Emulation Mode for
UCC/EAN Composite Codes
(0)

2D Symbologies

PDF417

Parameter # 15

SSI # 0Fh

Scan one of the following bar codes to enable or disable PDF417.

***Enable PDF417
(1)**

**Disable PDF417
(0)**

MicroPDF417

Parameter # 227

SSI # E3h

Scan one of the following bar codes to enable or disable MicroPDF417.

**Enable MicroPDF417
(1)**
***Disable MicroPDF417
(0)**

Code 128 Emulation

Parameter # 123

SSI # 7Bh

Enable this parameter to transmit data from certain MicroPDF417 symbols as Code 128. You must enable *AIM Code Identifiers on page E-3* for this parameter to work.

Enable Code 128 Emulation to transmit these MicroPDF417 symbols with one of the following prefixes:

>]C1   if the first codeword is 903-905

>]C2   if the first codeword is 908 or 909

>]C0   if the first codeword is 910 or 911

Disable Code 128 Emulation to transmit these MicroPDF417 symbols with one of the following prefixes:

>]L3   if the first codeword is 903-905

>]L4   if the first codeword is 908 or 909

>]L5   if the first codeword is 910 or 911

Scan one of the following bar codes to enable or disable Code 128 Emulation.

✓ *NOTE* Linked MicroPDF codewords 906, 907, 912, 914, and 915 are not supported. Use GS1 Composites instead.

**Enable Code 128 Emulation
(1)**

***Disable Code 128 Emulation
(0)**

Data Matrix

Parameter # 292

SSI # F0h, 24h

Scan one of the following bar codes to enable or disable Data Matrix.

*Enable Data Matrix
(1)

Disable Data Matrix
(0)

GS1 Data Matrix

Parameter # 1336

SSI # F8h 05h 38h

Scan one of the following bar codes to enable or disable GS1 Data Matrix.

Enable GS1 Data Matrix
(1)

*Disable GS1 Data Matrix
(0)

Data Matrix Inverse

Parameter # 588

SSI # F1h 4Ch

Scan one of the following bar codes to select the Data Matrix inverse decoder setting:

- **Regular Only** - The scanner decodes regular Data Matrix bar codes only.
- **Inverse Only** - The scanner decodes inverse Data Matrix bar codes only.
- **Inverse Autodetect** - The scanner decodes both regular and inverse Data Matrix bar codes.

Regular Only
(0)

Inverse Only
(1)

*Inverse Autodetect
(2)

Decode Data Matrix Mirror Images

Parameter # 537

SSI # F1h 19h

Scan one of the following bar codes to select an option for decoding mirror image Data Matrix bar codes:

- **Never** - Do not decode Data Matrix bar codes that are mirror images.
- **Always** - Decode only Data Matrix bar codes that are mirror images.
- **Auto** - Decode both mirrored and unmirrored Data Matrix bar codes.

Never
(0)

Always
(1)

*Auto
(2)

Maxicode

Parameter # 294

SSI # F0h, 26h

Scan one of the following bar codes to enable or disable Maxicode.

**Enable Maxicode
(1)**

***Disable Maxicode
(0)**

QR Code

Parameter # 293

SSI # F0h, 25h

Scan one of the following bar codes to enable or disable QR Code.

***Enable QR Code
(1)**

**Disable QR Code
(0)**

GS1 QR

Parameter # 1343

SSI # F8h 05h 3Fh

Scan one of the following bar codes to enable or disable GS1 QR.

Enable GS1 QR
(1)
***Disable GS1 QR**
(0)

MicroQR

Parameter # 573

SSI # F1h 3Dh

Scan one of the following bar codes to enable or disable MicroQR.

***Enable MicroQR**
(1)

Disable MicroQR
(0)

Aztec

Parameter # 574

SSI # F1h 3Eh

Scan one of the following bar codes to enable or disable Aztec.

✓ **NOTE** Enabling this also enables Linked Aztec.

*Enable Aztec
(1)

Disable Aztec
(0)

Aztec Inverse

Parameter # 589

SSI # F1h 4Dh

Scan one of the following bar codes to select the Aztec inverse decoder setting:

- **Regular Only** - The scanner decodes regular Aztec bar codes only.
- **Inverse Only** - The scanner decodes inverse Aztec bar codes only.
- **Inverse Autodetect** - The scanner decodes both regular and inverse Aztec bar codes.

Regular Only
(0)

Inverse Only
(1)

*Inverse Autodetect
(2)

Han Xin

Parameter # 1167

SSI # F8h 04h 8Fh

Scan one of the following bar codes to enable or disable Han Xin.

Enable Han Xin
(1)

*Disable Han Xin
(0)

Han Xin Inverse

Parameter # 1168

SSI # F8h 04h 90h

Scan one of the following bar codes to select a Han Xin inverse decoder setting:

- **Regular Only** - The scanner decodes Han Xin bar codes with normal reflectance only.
- **Inverse Only** - The scanner decodes Han Xin bar codes with inverse reflectance only.
- **Inverse Autodetect** - The scanner decodes both regular and inverse Han Xin bar codes.
*Regular Only
(0)

Inverse Only
(1)
Inverse Autodetect
(2)

Grid Matrix

Parameter # 1718

SSI # F8h 06h B6h

Scan one of the following bar codes to enable or disable Grid Matrix.

Enable
(1)
*Disable
(0)

Grid Matrix Inverse

Parameter # 1719

SSI # F8h 06h B7h

Scan one of the following bar codes to select a Grid Matrix inverse decoder setting:

- **Regular Only** - The scanner decodes regular Grid Matrix bar codes only.
- **Inverse Only** - The scanner decodes inverse Grid Matrix bar codes only.
- **Autodiscriminate** - The scanner decodes both regular and inverse Grid Matrix bar codes.

*Regular Only
(0)

Inverse Only
(1)

Autodiscriminate
(2)

Grid Matrix Mirror

Parameter # 1736

SSI # F8h 06h C8h

Scan one of the following bar codes to select a Grid Matrix mirror decoder setting:

- **Regular Only** - The scanner decodes regular Grid Matrix bar codes only.
- **Mirrored Only** - The scanner decodes mirrored Grid Matrix bar codes only.
- **Auto-discriminate** - The scanner decodes both regular and mirrored Grid Matrix bar codes.

***Regular Only
(0)**

**Mirrored Only
(1)**

**Autodiscriminate
(2)**

Escape Characters

Parameter # 233

SSI # E9h

This enables the backslash (\) character as an Escape character for systems that can process transmissions containing special data sequences. Scan one of the following bar codes to either format special data according to the GLI (Global Label Identifier) protocol, or to disable this parameter. This parameter only affects the data portion

of a Macro PDF symbol transmission; the Macro PDF Control Header (if enabled) is always sent with GLI formatting.

||||||||||||||||||||||||

**GLI Protocol
(2)**

||||||||||||||||||||||||

***None
(0)**

Flush Macro PDF Buffer

Scan the following bar code to flush the buffer of all decoded Macro PDF data stored to that point, transmit it to the host device, and abort from Macro PDF mode.

||||||||||||||||||||||||
Flush Macro PDF Buffer

Abort Macro PDF Entry

Scan the following bar code to clear all currently-stored Macro PDF data in the buffer without transmission and abort from Macro PDF mode.

||||||||||||||||||||||||

Abort Macro PDF Entry

Postal Codes

US Postnet

Parameter # 89

SSI # 59h

Scan one of the following bar codes to enable or disable US Postnet.

Enable US Postnet
(1)

*Disable US Postnet
(0)

US Planet

Parameter # 90

SSI # 5Ah

Scan one of the following bar codes to enable or disable US Planet.

Enable US Planet
(1)

*Disable US Planet
(0)

Transmit US Postal Check Digit

Parameter # 95

SSI # 5Fh

Scan one of the following bar codes to select whether to transmit US Postal data, which includes both US Postnet and US Planet, with or without the check digit.
*Transmit US Postal Check Digit
(1)
Do Not Transmit US Postal Check Digit
(0)

UK Postal

Parameter # 91

SSI # 5Bh

Scan one of the following bar codes to enable or disable UK Postal.

Enable UK Postal
(1)
*Disable UK Postal
(0)

Transmit UK Postal Check Digit

Parameter # 96

SSI # 60h

Scan one of the following bar codes to select whether to transmit UK Postal data with or without the check digit.

***Transmit UK Postal
Check Digit
(1)**

**Do Not Transmit UK Postal Check Digit
(0)**

Japan Postal

Parameter # 290

SSI # F0h, 22h

Scan one of the following bar codes to enable or disable Japan Postal.

**Enable Japan Postal
(1)**

***Disable Japan Postal
(0)**

Australia Post

Parameter # 291

SSI # F0h, 23h

Scan one of the following bar codes to enable or disable Australia Post.

**Enable Australia Post
(1)**

***Disable Australia Post
(0)**

Australia Post Format

Parameter # 718

SSI # F1h, CEh

Scan one of the following bar codes to select a format for Australia Post:

- **Autodiscriminate** (or Smart mode) - Decode the Customer Information Field using the N and C Encoding Tables.

✓ *NOTE* This option increases the risk of misdecodes because the encoded data format does not specify the Encoding Table used for encoding.

- **Raw Format** - Output raw bar patterns as a series of numbers 0 through 3.
- **Alphanumeric Encoding** - Decode the Customer Information Field using the C Encoding Table.
- **Numeric Encoding** - Decode the Customer Information Field using the N Encoding Table.

For more information on Australia Post Encoding Tables, refer to the *Australia Post Customer Barcoding Technical Specifications* available at www.auspost.com.au.

*Autodiscriminate
(0)

Raw Format
(1)

Alphanumeric Encoding

CHAPTER 13 DATA FORMATTING: ADF

Introduction

This chapter briefly describes the Zebra software tools available for customizing scanner operation.

Advanced Data Formatting (ADF)

Advanced Data Formatting (ADF) is a means of customizing data from before transmission to the host device. Use ADF to edit scan data to suit your host's requirements. With ADF you scan one barcode per trigger pull. ADF is programmed using 123Scan.

To watch a video on Creating an Advanced Data Formatting (ADF) Rule using 123Scan, go to:
http://www.zebra.com/ScannerHowToVideos

For information and programming bar codes for ADF, refer to the *Advanced Data Formatting Programmer Guide.*

APPENDIX A STANDARD DEFAULT PARAMETERS

Table A-1 *Parameter Defaults*

APPENDIX B COUNTRY CODES

Introduction

This chapter provides instructions for programming the keyboard to interface with a USB or keyboard wedge host. The host powers the scanner. For host setup information, see *Chapter 7, USB Interface* and *Chapter 11, Keyboard Wedge Interface*.

To select a code page for the country keyboard type, see *Appendix B, Country Codes*.

Throughout the programming bar code menus, default values are indicated with asterisks (*).
*Indicates Default ——— ***US English (North American)** ——— Feature/Option

USB and Keyboard Wedge Country Keyboard Types (Country Codes)

Scan the bar code corresponding to the keyboard type. For a USB host, this setting applies only to the USB Keyboard (HID) device. If the keyboard type is not listed, see *Keypad Emulation on page 7-12* for the USB HID host. For a keyboard wedge host, see *Alternate Numeric Keypad Emulation on page 11-6*.

> *NOTE* When changing USB country keyboard types the digital scanner automatically resets and issues the standard startup beep sequences.

> *NOTE* For best results when using international keyboards, enable *Quick Keypad Emulation on page 7-12*.

> *IMPORTANT* 1. Some country keyboard bar code types are specific to certain Windows Operating Systems (i.e., XP, and Win 7 or higher). Bar codes requiring a specific Windows OS are noted so in their bar code captions.
>
> 2. Use the **French International** bar code for Belgian French keyboards.

APPENDIX C COUNTRY CODE PAGES

Introduction

This chapter provides bar codes for selecting code pages for the country keyboard type selected in *Appendix C, Country Code Pages*. If the default code page in *Table C-1* is appropriate for your selected country keyboard type, you do not need to scan a country code page bar code.

> ✓ **NOTE** ADF rules can also specify a code page based on the symbology and other ADF criteria. Refer to the *Advanced Data Formatting Programmer Guide*.

Country Code Page Defaults

Table C-1 lists the code page default for each country keyboard.

Table C-1 *Country Code Page Defaults*

Country Keyboard	Code Page Default
US English (North American)	Windows 1252

APPENDIX D CKJ DECODE CONTROL

Introduction

This appendix describes control parameters for CJK (Chinese, Japanese, Korean) bar code decode through USB HID Keyboard Emulation mode.

✓ **NOTE** Because ADF does not support CJK character processing, there is no format manipulation for CJK output.

CJK Control Parameters

Unicode Output Control

Parameter # 973

For a Unicode encoded CJK bar code, select one of the following options for unicode output:

- **Universal Output to Unicode and MBCS Application** - This default method applies to Unicode and MBCS expected applications, such as MS Word and Notepad on a Windows host.

> ✓ *NOTE* To support Unicode universal output, set up the registry table for the Windows host. See *Unicode/CJK Decode Setup with Windows Host on page D-7*.

- **Output to Unicode Application Only** - This method applies only to Unicode expected applications, such as MS Word and WordPad, but not Notepad.

***Universal Output
(0)**
**Unicode Application Only
(1)**

CJK Output Method to Windows Host

Parameter # 972

For a national standard encoded CJK bar code, select one of the following options for CJK output to a Windows host:

- **Universal CJK Output** - This is the default universal CJK output method for US English IME or Chinese/Japanese/Korean ASCII IME on a Windows host. This method converts CJK characters to Unicode and emulates the characters when transmitting to the host. Use the *Unicode Output Control* parameter to control Unicode output.

  ✓ *NOTE* To support universal CJK output, set up the registry table for the Windows host. See *Unicode/CJK Decode Setup with Windows Host on page D-7*.

- **Other options for CJK output** - With the following methods, the scanner sends the CJK character hexadecimal internal code (Nei Ma) value to host, or converts the CJK character to Unicode and sends the hexadecimal Unicode value to host. When using these methods, the Windows host must select the corresponding IME to accept the CJK character. See *Unicode/CJK Decode Setup with Windows Host on page D-7*.
  - **Japanese Unicode Output**
  - **Simplified Chinese GBK Code Output**
  - **Simplified Chinese Unicode Output**
  - **Korean Unicode Code Output**
  - **Traditional Chinese Big5 Code Output** (Windows XP)
  - **Traditional Chinese Big5 Code Output** (Windows 7)
  - **Traditional Chinese Unicode Code Output** (Windows XP)
  - **Traditional Chinese Unicode Code Output** (Windows 7)

  ✓ *NOTE* The Unicode emulate output method depends on the host system (Windows XP or Windows 7).

***Universal CJK Output
(0)**

**Japanese Unicode Output
(34)**

(for Japanese Unicode Output, select Simplified Chinese Unicode IME on the Windows host)

CJK Output Method to Windows Host (continued
**Chinese (Simplified) GBK Output
(1)**
**Chinese (Simplified) Unicode Output
(2)**

**Korean Unicode Output
(50)**

(for Korean Unicode Output, select Simplified Chinese
Unicode IME on the Windows host)

**Chinese (Traditional) Big5 Output (Windows XP)
(17)**

**Chinese (Traditional) Big5 Output (Windows 7)
(19)**

**Chinese (Traditional) Unicode Output (Windows XP)
(18)**

**Chinese (Traditional) Unicode Output (Windows 7)
(20)**

Non-CJK UTF Bar Code Output

Parameter # 960

Some country keyboard type layouts contain characters that do not exist in the default code page (see *Country Keyboard Type Missing Characters on page D-6*). Although the default code page can not encode these characters in a bar code, they can be encoded in the UTF-8 bar code. Scan this parameter bar code to output the Unicode values by emulation mode.

✓   *NOTE* Use this special country keyboard type to decode the non-CJK UTF-8 bar code. After decoding, re-configure the scanner to use the original country keyboard type.

Use US English IME on Windows. See *Unicode Output Control on page D-2*.

Non-CJK UTF-8 Emulation Output

Country Keyboard Type Missing Characters

Country keyboard type: **Tatar, Uzbek, Mongolian, Kyrgyz, Kazakh and Azeri**
Default code page: CP1251
Missing characters:

ғ	Ғ
х̌	Х̌
қ	Қ
h	h
ө	Ѳ
ə	Ә
ү	Y
ң	Ң
җ	Җ
Ҭ	
ӈ	Ӈ
ұ	Ұ
қ	Қ
ҷ	Ҷ
қ	Қ

Country keyboard type: **Romanian (Standard)**
Default code page: CP1250
Missing characters:

ș	Ș
ț	Ț

Country keyboard type: **Portuguese-Brazilian (ABNT), Portuguese-Brazilian (ABNT2)**
Default code page: CP1252
Missing character: ₢

Country keyboard type: **Azeri-Latin**

Default code page: CP1254

Missing characters: ə, Ə

Unicode/CJK Decode Setup with Windows Host

This section describes how to set up CJK decode with a Windows host.

Setting Up the Windows Registry Table for Unicode Universal Output

To support the Unicode universal output method, set up the Windows host registry table as follows:

1. Select **Start > Run > regedt32** to start the registry editor.

2. Under **HKEY_Current_User\Control Panel\Input Method**, set **EnableHexNumpad** to **1** as follows:

   [HKEY_CURRENT_USER\Control Panel\Input Method]

   "EnableHexNumpad"="1"

   If this key does not exist, add it as type **REG_SZ** (string value).

3. Reboot the computer to implement the registry change.

Adding CJK IME on Windows

To add the desired CJK input language:

1. Click **Start > Control Panel**.

2. If the Control Panel opens in category view, select **Switch to Classic View** in the top left corner.

3. Select **Regional and Language Options**.

4. Click the **Language** tab.

5. Under **Supplemental Language Support**, select the **Install Files for East Asian Languages** check box if not already selected, and click **Apply**. This may require a Windows installation CD to install the required files. This step ensures that the East Asian Languages (CJK) are available.

6. Under **Text Services and Input Language**, click **Details**.

7. Under **Installed Services**, click **Add**.

8. In the **Add Input Language** dialog box, choose the CJK input language and keyboard layout or Input Method Editor (IME) to add.

9. Click **OK** twice. The language indicator appears in the system tray (at bottom right corner of the desktop by default). To switch between input languages (keyboard languages) select the language indicator in the system tray.

10. Select the language indicator in the system tray to select the desired country keyboard type.

11. Verify that the characters displayed on each country's keyboard appear.

Selecting the Simplified Chinese Input Method on the Host

To select the Simplified Chinese input method:

- Select Unicode/GBK input on Windows XP: **Chinese (Simplified) - NeiMa**, then click the input bar to select **Unicode** or **GBK NeiMa** input.
Or

- Select Unicode/GBK input on Windows7: **Chinese (Simplified) - Microsoft Pinyin New Experience Input Style**, then select **Tool Menu > Secondary Inputs > Unicode Input** or **GB Code Input**.
Selecting the Traditional Chinese Input Method on the Host

To select the Traditional Chinese input method:

- Select Unicode input on Windows XP: **Chinese (Traditional) - Unicode**
- Select Big5 input on Windows XP: **Chinese (Traditional) - Big5 Code**
- Select Unicode/Big5 input on Windows 7: **Chinese (Traditional) - New Quick**. This option support both Unicode and Big5 input.

APPENDIX E PROGRAMMING REFERENCE

Symbol Code Identifiers

Table E-1   *Symbol Code Characters*

Code Character	Code Type
A	UPC-A, UPC-E, UPC-E1, EAN-8, EAN-13
B	Code 39, Code 32
C	Codabar
D	Code 128, ISBT 128, ISBT 128 Concatenated
E	Code 93
F	Interleaved 2 of 5
G	Discrete 2 of 5, or Discrete 2 of 5 IATA
H	Code 11
J	MSI
K	GS1-128
L	Bookland EAN
M	Trioptic Code 39
N	Coupon Code
R	GS1 DataBar Family
S	Matrix 2 of 5
T	UCC Composite, TLC 39
U	Chinese 2 of 5

Table E-1 *Symbol Code Characters (Continued)*

Code Character	Code Type
V	Korean 3 of 5
X	ISSN EAN, PDF417, Macro PDF417, Micro PDF417
z	Aztec, Aztec Rune
P00	Data Matrix
P01	QR Code, MicroQR
P02	Maxicode
P03	US Postnet
P04	US Planet
P05	Japan Postal
P06	UK Postal
P08	Netherlands KIX Code
P09	Australia Post
P0A	USPS 4CB/One Code/Intelligent Mail
P0B	UPU FICS Postal
P0C	Mailmark
P0G	GS1 Data Matrix
P0H	Han Xin
P0Q	GS1 QR
P0X	Signature Capture

AIM Code Identifiers

Each AIM Code Identifier contains the three-character string **]cm** where:

]   = Flag Character (ASCII 93)
c   = Code Character (see *Table E-2*)
m   = Modifier Character (see *Table E-3*)

Table E-2   *Aim Code Characters*

Code Character	Code Type
A	Code 39, Code 39 Full ASCII, Code 32
C	Code 128, ISBT 128, ISBT 128 Concatenated, GS1-128, Coupon (Code 128 portion)
d	Data Matrix, GS1 Data Matrix
E	UPC/EAN, Coupon (UPC portion)
e	GS1 DataBar Family
F	Codabar
G	Code 93
H	Code 11
h	Han Xin
I	Interleaved 2 of 5
L	PDF417, Macro PDF417, Micro PDF417
L2	TLC 39
M	MSI
Q	QR Code, MicroQR, GS1 QR
S	Discrete 2 of 5, IATA 2 of 5
U	Maxicode
z	Aztec, Aztec Rune
X	Bookland EAN, ISSN EAN, Trioptic Code 39, Chinese 2 of 5, Matrix 2 of 5, Korean 3 of 5, US Postnet, US Planet, UK Postal, Japan Postal, Australia Post, Netherlands KIX Code, USPS 4CB/One Code/Intelligent Mail, UPU FICS Postal, Mailmark, Signature Capture

The modifier character is the sum of the applicable option values based on *Table E-3*.

Table E-3   *Modifier Characters*

Code Type	Option Value	Option
Code 39	0	No check character or Full ASCII processing.
	1	Reader has checked one check character.
	3	Reader has checked and stripped check character.
	4	Reader has performed Full ASCII character conversion.
	5	Reader has performed Full ASCII character conversion and checked one check character.
	7	Reader has performed Full ASCII character conversion and checked and stripped check character.
	Example: A Full ASCII bar code with check character W, **A+I+MI+DW**, is transmitted as **]A7**AIMID where 7 = (3+4).	
Trioptic Code 39	0	No option specified at this time. Always transmit 0.
	Example: A Trioptic bar code 412356 is transmitted as **]X0**412356	
Code 128	0	Standard data packet, no Function code 1 in first symbol position.
	1	Function code 1 in first symbol character position.
	2	Function code 1 in second symbol character position.
	Example: A Code (EAN) 128 bar code with Function 1 character ^{FNC1} in the first position, AIMID is transmitted as **]C1**AIMID	
I 2 of 5	0	No check digit processing.
	1	Reader has validated check digit.
	3	Reader has validated and stripped check digit.
	Example: An I 2 of 5 bar code without check digit, 4123, is transmitted as **]I0**4123	
Codabar	0	No check digit processing.
	1	Reader has checked check digit.
	3	Reader has stripped check digit before transmission.
	Example: A Codabar bar code without check digit, 4123, is transmitted as **]F0**4123	
Code 93	0	No options specified at this time. Always transmit 0.
	Example: A Code 93 bar code 012345678905 is transmitted as **]G0**012345678905	
MSI	0	Check digits are sent.
	1	No check digit is sent.
	Example: An MSI bar code 4123, with a single check digit checked, is transmitted as **]M1**4123	

Table E-3   *Modifier Characters (Continued)*

Code Type	Option Value	Option
D 2 of 5	0	No options specified at this time. Always transmit 0.
	Example: A D 2 of 5 bar code 4123, is transmitted as **]S0**4123	
UPC/EAN	0	Standard data packet in full EAN format, i.e. 13 digits for UPC-A, UPC-E, and EAN-13 (not including supplemental data).
	1	Two digit supplemental data only.
	2	Five digit supplemental data only.
	3	Combined data packet comprising 13 digits from EAN-13, UPC-A or UPC-E symbol and 2 or 5 digits from supplemental symbol.
	4	EAN-8 data packet.
	Example: A UPC-A bar code 012345678905 is transmitted as **]E0**0012345678905	
Bookland EAN	0	No options specified at this time. Always transmit 0.
	Example: A Bookland EAN bar code 123456789X is transmitted as **]X0**123456789X	
ISSN EAN	0	No options specified at this time. Always transmit 0.
	Example: An ISSN EAN bar code 123456789X is transmitted as **]X0**123456789X	
Code 11	0	Single check digit
	1	Two check digits
	3	Check characters validated but not transmitted.
GS1 DataBar Family		No option specified at this time. Always transmit 0. GS1 DataBar Omnidirectional and GS1 DataBar Limited transmit with an Application Identifier "01". Note: In GS1-128 emulation mode, GS1 DataBar is transmitted using Code 128 rules (i.e.,]C1).
	Example: A GS1 DataBar Omnidirectional bar code 0110012345678902 is transmitted as **]e0**0110012345678902.	

Table E-3   *Modifier Characters (Continued)*

Code Type	Option Value	Option
EAN.UCC Composites (GS1 DataBar, GS1-128, 2D portion of UPC composite)		Native mode transmission. Note: UPC portion of composite is transmitted using UPC rules.
	0	Standard data packet.
	1	Data packet containing the data following an encoded symbol separator character.
	2	Data packet containing the data following an escape mechanism character. The data packet does not support the ECI protocol.
	3	Data packet containing the data following an escape mechanism character. The data packet supports the ECI protocol.
		GS1-128 emulation Note: UPC portion of composite is transmitted using UPC rules.
	1	Data packet is a GS1-128 symbol (i.e., data is preceded with]JC1).
PDF417, Micro PDF417	0	Reader set to conform to protocol defined in 1994 PDF417 symbology specifications. **Note:** When this option is transmitted, the receiver cannot reliably determine whether ECIs have been invoked or whether data byte 92_{DEC} has been doubled in transmission.
	1	Reader set to follow the ECI protocol (Extended Channel Interpretation). All data characters 92_{DEC} are doubled.
	2	Reader set for Basic Channel operation (no escape character transmission protocol). Data characters 92_{DEC} are not doubled. **Note:** When decoders are set to this mode, unbuffered Macro symbols and symbols requiring the decoder to convey ECI escape sequences cannot be transmitted.
	3	The bar code contains a GS1-128 symbol, and the first codeword is 903-907, 912, 914, 915.
	4	The bar code contains a GS1-128 symbol, and the first codeword is in the range 908-909.
	5	The bar code contains a GS1-128 symbol, and the first codeword is in the range 910-911.
	Example: A PDF417 bar code ABCD, with no transmission protocol enabled, is transmitted as]L2ABCD.	

Table E-3   *Modifier Characters (Continued)*

Code Type	Option Value	Option
Data Matrix	0	ECC 000-140, not supported.
	1	ECC 200.
	2	ECC 200, FNC1 in first or fifth position.
	3	ECC 200, FNC1 in second or sixth position.
	4	ECC 200, ECI protocol implemented.
	5	ECC 200, FNC1 in first or fifth position, ECI protocol implemented.
	6	ECC 200, FNC1 in second or sixth position, ECI protocol implemented.
MaxiCode	0	Symbol in Mode 4 or 5.
	1	Symbol in Mode 2 or 3.
	2	Symbol in Mode 4 or 5, ECI protocol implemented.
	3	Symbol in Mode 2 or 3, ECI protocol implemented in secondary message.
QR Code	0	Model 1 symbol.
	1	Model 2 / MicroQR symbol, ECI protocol not implemented.
	2	Model 2 symbol, ECI protocol implemented.
	3	Model 2 symbol, ECI protocol not implemented, FNC1 implied in first position.
	4	Model 2 symbol, ECI protocol implemented, FNC1 implied in first position.
	5	Model 2 symbol, ECI protocol not implemented, FNC1 implied in second position.
	6	Model 2 symbol, ECI protocol implemented, FNC1 implied in second position.
Aztec	0	Aztec symbol.
	C	Aztec Rune symbol.
Han Xin	0	Generic data, no special features are set. The transmitted data does not follow the AIM ECI protocol.
	1	ECI protocol enabled. There is at least one ECI mode encoded. Transmitted data must follow the AIM ECI protocol.

APPENDIX I ASCII CHARACTER SETS

NOTE For the Keyboard Wedge Interface, Code 39 Full ASCII interprets the bar code special character ($ + % /) preceding a Code 39 character and assigns an ASCII character value to the pair. For example, if you enable Code 39 Full ASCII and scan **+B**, it transmits as **b**, **%J** as **?**, and **%V** as **@**.
Scanning **ABC%I** outputs the keystroke equivalent of **ABC >.**

Table I-1 *ASCII Character Set*

ASCII Value (Prefix/Suffix Value for RS-232)	Full ASCII Code 39 Encode Char	Keystroke	ASCII Character (Applies to RS-232 Only)
1000	%U	CTRL 2	NUL
1001	$A	CTRL A	SOH
1002	$B	CTRL B	STX
1003	$C	CTRL C	ETX
1004	$D	CTRL D	EOT
1005	$E	CTRL E	ENQ
1006	$F	CTRL F	ACK
1007	$G	CTRL G	BELL
1008	$H	CTRL H/**BACKSPACE**[1]	BCKSPC
1009	$I	CTRL I/**HORIZONTAL TAB**[1]	HORIZ TAB
1010	$J	CTRL J	LF/NW LN
1011	$K	CTRL K	VT
1012	$L	CTRL L	FF

[1]The keystroke in bold transmits only if you enabled *Function Key Mapping on page 7-14* or *page 11-8*.
Otherwise, the unbold keystroke transmits.

Table I-1   *ASCII Character Set (Continued)*

ASCII Value (Prefix/Suffix Value for RS-232)	Full ASCII Code 39 Encode Char	Keystroke	ASCII Character (Applies to RS-232 Only)
1013	$M	CTRL M/**ENTER**[1]	CR/ENTER
1014	$N	CTRL N	SO
1015	$O	CTRL O	SI
1016	$P	CTRL P	DLE
1017	$Q	CTRL Q	DC1/XON
1018	$R	CTRL R	DC2
1019	$S	CTRL S	DC3/XOFF
1020	$T	CTRL T	DC4
1021	$U	CTRL U	NAK
1022	$V	CTRL V	SYN
1023	$W	CTRL W	ETB
1024	$X	CTRL X	CAN
1025	$Y	CTRL Y	EM
1026	$Z	CTRL Z	SUB
1027	%A	CTRL [	ESC
1028	%B	CTRL \	FS
1029	%C	CTRL]	GS
1030	%D	CTRL 6	RS
1031	%E	CTRL -	US
1032	Space	Space	Space
1033	/A	!	!
1034	/B	"	"

APPENDIX K SIGNATURE CAPTURE CODE

Introduction

CapCode, a signature capture code, is a special pattern that encloses a signature area on a document and allows a scanner to capture a signature.

There are several accepted patterns that allow automatic identification of different signatures on the same form. For example, on the federal tax return 1040 form there are three signature areas, one each for two joint filers, and one for a professional preparer. By using different patterns, a program can correctly identify all three, so they can be captured in any sequence and still be identified correctly.

✓ **NOTE** Although the DS2208 digital scanner supports signature capture, the quality of the image is not guaranteed. If the image does not meet your needs it is recommended that you upgrade to a DS4308 or DS8108 scanner.

Code Structure

Signature Capture Area

A CapCode is printed as two identical patterns on either side of a signature capture box, as shown in *Figure K-1*. Each pattern extends the full height of the signature capture box.

The box is optional, so you can omit it, replace it with a single baseline, or print a baseline with an "X" on top of it towards the left, as is customarily done in the US to indicate a request for signature. However, if an "X" or other markings are added in the signature box area, these are captured with the signature.

Figure K-1 *CapCode*

CapCode Pattern Structure

A CapCode pattern structure consists of a start pattern followed by a separator space, a signature capture box, a second separator space, and then a stop pattern. Assuming that X is the dimension of the thinnest element, the start and stop patterns each contains 9X total width in 4 bars and 3 spaces. A 7X quiet zone is required to the left and to the right of the CapCode pattern.
Figure K-2 *CapCode Structure*

The separator spaces on either side of the signature capture box can be between 1X and 3X wide.

Start / Stop Patterns

Table K-1 lists the accepted start / stop patterns. The bar and space widths are expressed as multiples of X. You must use the same pattern on either side of a signature capture box. The type value is reported with the captured signature to indicate the purpose of the signature captured.

Table K-1 *Start / Stop Pattern Definitions*

Bar/Space Patterns							Type
B	S	B	S	B	S	B	
1	1	2	2	1	1	1	2
1	2	2	1	1	1	1	5
2	1	1	2	1	1	1	7
2	2	1	1	1	1	1	8
3	1	1	1	1	1	1	9

Table K-2 lists selectable parameters used to generate the image of the captured signature.

Table K-2   *User Defined CapCode Parameters*

Parameter	Defined
Width	Number of pixels
Height	Number of pixels
Format	JPEG, BMP, TIFF
JPEG quality	1 (most compression) to 100 (best quality)
Bits Per Pixel (not applicable to JPEG format)	1 (2 levels)
	4 (16 levels)
	8 (256 levels)

BMP format does not use compression, JPEG and TIFF formats do.

Dimensions

The size of the signature capture box is determined by the height and separation of the start and stop patterns. The line width of the signature capture box is insignificant.

The thinnest element width, referred to here as X, is nominally 10 mils (1 mil = 0.0254 mm). Select this as an exact multiple of the pixel pitch of the printer used. For example, when using a 203 DPI (dots-per-inch) printer and printing 2 dots per module, the resulting X dimension is 9.85 mils.

Data Format

The decoder output is formatted according to *Table K-3*. Zebra decoders allow different user options to output or inhibit bar code type. Selecting "Symbol ID" as the bar code type for output identifies the CapCode with letter "i".

Table K-3   *Data Format*

File Format (1 byte)	Type (1 byte)	Image Size (4 bytes, BIG Endian)	Image Data
JPEG - 1 BMP - 3 TIFF - 4	See *Table K-1*, last column		(Same bytes as in a data file)

Additional Capabilities

Regardless of how the signature is captured, the output signature image is de-skewed and right-side up.

A scanner that captures signatures automatically determines whether it is scanning a signature or a bar code. You can disable the signature capturing capability in a decoder.

Signature Boxes

Figure K-3 illustrates the five acceptable signature boxes:

Type 2:

Type 5:

Type 7:

Type 8:

Type 9:

APPENDIX L NON-PARAMETER ATTRIBUTES

Introduction

This appendix defines non-parameter attributes.

Attributes

Model Number

Attribute #533

Model number of the scanner. This electronic output matches the printout on the physical device label, for example **DS2208-SR00007ZZWW**.

Type	S
Size (Bytes)	18
User Mode Access	R
Values	Variable

Serial Number

Attribute #534

Unique serial number assigned in the manufacturing facility. This electronic output matches the printout on the physical device label, for example **M1J26F45V**.

Type	S
Size (Bytes)	16
User Mode Access	R
Values	Variable

Date of Manufacture

Attribute #535

Date of device manufacture assigned in the manufacturing facility. This electronic output matches the printout on the physical device label, for example **30DEC16** (which reads the 30th of April 2014).

Type	S
Size (Bytes)	7
User Mode Access	R
Values	Variable

Date of First Programming

Attribute #614

Date of first electronic programming represents the first time settings where electronically loaded to the scanner either by 123Scan or via SMS, for example **30DEC16** (which reads the 30th of December 2016).

Type	S
Size (Bytes)	7
User Mode Access	R
Values	Variable

Configuration Filename

Attribute #616

The name assigned to the configuration settings loaded electronically to the device either by 123Scan or via SMS.

✓ *NOTE* Scanning the **Set Defaults** bar code automatically changes the configuration filename to *factory defaults*.

To indicate the configuration settings loaded to the device were changed, the configuration filename changes to *Modified* upon scanning any parameter bar code.

Type	S
Size (Bytes)	17
User Mode Access	RW
Values	Variable

Beeper/LED

Attribute #6000

Activates the beeper and/or LED.

Type   X
Size (Bytes)   N/A
User Mode Access   W
Values:

Beep / LED Action	Value
1 high short beep	0
2 high short beeps	1
3 high short beeps	2
4 high short beeps	3
5 high short beeps	4
1 low short beep	5
2 low short beeps	6
3 low short beeps	7
4 low short beeps	8
5 low short beeps	9
1 high long beep	10
2 high long beeps	11
3 high long beeps	12
4 high long beeps	13
5 high long beeps	14
1 low long beep	15
2 low long beeps	16
3 low long beeps	17
4 low long beeps	18
5 low long beeps	19
Fast warble beep	20
Slow warble beep	21
High-low beep	22
Low-high beep	23
High-low-high beep	24
Low-high-low beep	25
High-high-low-low beep	26
Green LED off	42
Green LED on	43
Red LED on	47
Red LED off	48

Parameter Defaults

Attribute #6001

This attribute restores all parameters to their factory defaults.

Type	X
Size (Bytes)	N/A
User Mode Access	W
Values	0 = Restore Defaults
	1 = Restore Factory Defaults
	2 = Write Custom Defaults

Beep on Next Bootup

Attribute #6003

This attribute configures (enables or disables) beep on next boot up of scanner.

Type	X
Size (Bytes)	N/A
User Mode Access	W
Values	0 = Disable beep on next bootup
	1 = Enable beep on next bootup

Reboot

Attribute #6004

This attribute initiates a device reboot.

Type	X
Size (Bytes)	N/A
User Mode Access	W
Values	N/A

Host Trigger Session

Attribute #6005

This attribute triggers a decode session similar to manually depressing the scanner trigger button.

Type	X
Size (Bytes)	N/A
User Mode Access	W
Values	1 = Start Host Trigger Session
	0 = Stop Host Trigger Session

Firmware Version

Attribute #20004

The scanner's operating system version. For example, **PAADES00-001-R00D0**.

Type	S
Size (Bytes)	Variable
User Mode Access	R
Values	Variable

ImageKit Version

Attribute #20008

Identifies the 1D decode algorithms resident on the device, for example **IMGKIT_7.03T01**.

Type	S
Size (Bytes)	Variable
User Mode Access	R
Values	Variable
